A History of East Baltic through Language Contact

PROEFSCHRIFT

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 6 juli 2023
klokke 11.15 uur

door

Anthony Misha Jakob

geboren te Londen (Verenigd Koninkrijk)

in 1992

Promotores

Prof.dr. G.J. Kroonen

Prof.dr. A.M. Lubotsky

Promotiecommissie

Dr. P.J. Kallio (Helsingin yliopisto)

Prof.dr. C.C. Levelt

Dr. T.C. Pronk

Prof.dr. P.C.H. Schrijver (Universiteit Utrecht)

This research was carried out with funding from the European Research Council (ERC) under the European Union's Horizon 2020 research and innovation programme (Grant agreement No. 716732).

Acknowledgements

The first seed for this dissertation was planted back in 2017 when I told Tijmen Pronk I'd be curious to study the whole subject of "substrate words" in Indo-European. This topic had interested me ever since I first flicked through Derksen's etymological dictionaries. The idea that some of the words in the modern languages could have been borrowed from undocumented sources was something that seemed very appealing to me, especially in northern Europe where the historical record is so shallow. Tijmen put me in touch with Guus Kroonen, and a couple of years on, I was accepted onto Guus' project ('The Linguistic Roots of Europe's Agricultural Transition').

It was amazing to have been able to conduct my research as part of a team, and the weekly group meetings, daily lunches and constant exchange of ideas (and idiocy) were a reliable source of inspiration and the perfect antidote to the mundane aspects of research. This team mentality led to three joint papers (Palmér et al. 2021; Kroonen et al. 2022; Thorsø et al. 2023), the workshop *Sub-Indo-European Europe*, which we hosted in August 2021, and a forthcoming volume based on the results of this workshop. Not only that, but the methodology expounded and applied in the second half of this work is as much a team effort as it is my own. I would like to sincerely thank Yvonne van Amerongen, Paulus van Sluis, Cid Swanenvleugel, Rasmus Thorsø, Andrew Wigman and honorary team member Axel Palmér for making these four years so special.

My individual project took me in a number of unexpected directions. Sergejus Tarasovas has taught me the ways of philological pedantry, and shown me that there is light at the end of most rabbit holes. Countless insights in this work, both big and small, ultimately derive from our discussions (some more are to be published as Jakob *forthc. d.*). Alexander Savelyev has shown incredible patience in giving me a crash course in Turkic linguistics. Practically all discussions of Turkic languages in this dissertation have greatly benefited from his input.

Most significant, however, was my journey to becoming a Uralicist (which perhaps I could now call myself, having spoken at the Finno-Ugricist Conference in Vienna, August 2022) — something I'd never considered when starting out on this project. A significant catalyzer for me has been the work of Ante Aikio, whose accessible writing style was the gateway I needed, but I would also like to thank Petri Kallio, Sampsa Holopainen, Juho Pystynen, Abel Warries and Mikhail Zhivlov for giving me heaps of constructive criticism and ideas which have made this dissertation considerably better, and especially Santeri Junntila, not only for the same, but also for providing me with an enormous amount of literature I would not otherwise have been able to access.

Dozens of other people have, at various moments, given me answers, made me question the answers I had, or made me realize I was asking the wrong questions. Without them, this dissertation would not be half what it is, and I will mention just one dozen who happen to spring to mind: Lucien van Beek, Chams Bernard, Eugen Hill, Martin Kümmel, Giedrė Motuzaitė Matuzevičiūtė, Michaël Peyrot, Tijmen Pronk, Peter Schrijver, Zsolt Simon, David Stifter and Rémy Viredaz.

This project would not have existed at all, of course, if it wasn't for its initiator Guus Kroonen and Professor (now Emeritus) Sasha Lubotsky,

who have supervised me throughout these four and a half years. And I know all too well that hasn't been the easiest of tasks. I am eternally grateful to them both for keeping their faith in me and helping me grow as a person. It has been an eventful few years, with the Covid-19 pandemic and war in Ukraine both massively impacting my personal life. The former — for the better, since it meant me and my wife could spend an unexpected and magical year together in Leipzig, the latter — decidedly for the worse, although for us it has been rather overshadowed by a serious struggle with my mother-in-law's health. I am incredibly thankful to Guus for being so understanding and allowing me to take the steps I needed.

Finally, let me mention my parents, Dan and Barbara, and my adoptive parent, Natalya, who are always categorically supportive and who I can always rely on to be on my side, no matter what kind of pickle I'm in. Last and most of all, I am thankful to my wife Sasha. I know she has had to put up with a lot, including a lot of my absence, but she has brightened up every single day and given me a reason to carry on. My only hope now is that we finally get a chance to find out what "normal" means!

Symbols and abbreviations

For abbreviated titles, see the relevant subsection of the bibliography.

Symbols

*	1. (before lemma) reconstructed form; 2. (after lemma) unattested form of an attested lexeme
**	counterfactual form
#	(in reconstructions) word boundary
∅	zero
·	introduces a gloss
=	'(historically) identical to'
~	'belongs with (in unspecified capacity)', 'in variation with'
/	1. mutually exclusive alternative, 2. (in citations) demarcates co-authors
:	1. paradigmatically alternates with; 2. correlates with (providing an analogical model)
∞	'irregularly alternates with'
<	'developed from', 'derived from'
<<	'analogically replaced by' (also used of semantic developments)
←	'borrowed from'
//	phonological transcription
[]	1. phonetic transcription; 2. alteration to quoted text or form
< >	orthographic transcription
<i>C</i>	consonant
<i>H</i>	laryngeal
<i>N</i>	nasal
<i>R</i>	resonant
<i>T</i>	dental stop
<i>V</i>	vowel

General

arch. – archaic	NE – north-east

PRES. – present
PRET. – preterite
PRT. – participle
SG. – singular

Data sources and conventions

Reconstructions

In general, following in part the practice adopted by OED³, I have avoided providing reconstructions unless this is necessary for the argument. The rationale is to maximize the emphasis given to attested data, and also reduce the need for me as an author to make a clear stand with regard to theoretical aspects of reconstruction where these are not strictly relevant to an argument. For instance, while one might object to my reconstruction of Lithuanian *avis* ‘sheep’ as PIE **h₃eui-*, it is unlikely anyone will object to its equation with Latin *ovis* ‘sheep’. I have made an exception in the case of evidence from Uralic languages, for which I have provided reconstructions quite systematically. This is partly a means to provide additional clarity for readers more familiar with Indo-European than with Uralic, but is also a reflection of my own process in dealing with these languages.

In the following cases, my reconstruction differs from the established norm and/or requires certain clarification:

East Baltic — Acute intonation is marked with the circumflex or caret ($\hat{\ }$), following the use of this symbol as an indication of the broken tone in Latvian tonal orthography.

Slavic — My reconstruction of the Slavic vowel system differs from the OCS-based one conventionally used (for instance, in the dictionaries of Berneker, Vasmer, Derksen, and ЭССЯ). The use of the standard reconstruction leads to anachronisms, such as an apparent claim that the Early North Russian source of e.g. Finnish dial. *akkuna* ‘window’ is

more archaic than its Proto-Slavic ancestor. In general, I consider the Slavic vowel shift to be a Common Slavic, not Proto-Slavic development (cf. Olander 2015: 59–67), and therefore use a reconstruction with pre-vowel shift values.¹ The reconstruction used in this work is as follows:

This work			Traditional		
ī	ȳ	ū	i	y	u
i		u	ь		ъ
e		a	e		o
ē		ā	ě		a

Finnic — In line with the “Leiden” tradition of not marking allophonic features, such as syllabic resonants, in reconstructions, I do not mark consonant gradation, as this is entirely predictable in Proto-Finnic (except for *s between unstressed vowels, where I have preserved the alternation with *h). Therefore, I reconstruct Finnish *hammas* (GEN.SG. *hampaan*) ‘tooth’ as **hampas* rather than **hambas*, **hamβas* or **hamṗas*.

Data sources

In compiling this work, I have endeavoured to check all the forms cited in primary sources. I have generally avoided citing data which I was unable to independently verify, unless this is crucial to an argument. A selection of literature used to source the forms from the most

¹ Differently from Olander, I do not operate with a Proto-Slavic predating the monophthongization of diphthongs. One reason for this is practicality: for instance, it is often impossible to decide whether Common Slavic *i* derives in any particular case from an earlier **ei* or **ī*. However, I also do not consider it likely that the monophthongization was a post-Proto-Slavic development: the absence of the second palatalization in North Russian (cf. also Holzer 2001: 39–40) does not necessarily imply that it branched off before the development **ai* > **ē* since there is no reason to exclude an intermediate stage */kæ:/.

important languages for this work is presented below. The orthography follows the cited sources unless otherwise indicated. References not provided in full can be found in the bibliography. All web links are valid as of 31 May 2023.
