From code to clinic
Theory and practice for artificial intelligence prediction algorithms

Proefschrift

ter verkrijging van

de graad van doctor aan de Universiteit Leiden,

op gezag van rector magnificus prof.dr.ir. H. Bijl,

volgens besluit van het college voor promoties

te verdedigen op woensdag 11 oktober 2023

klokke 16:15 uur

door

Anna Adriana Hermine de Hond

PROMOTOR
Prof. dr. E.W. Steyerberg

CO-PROMOTOR

Dr. I.M.J. Kant	Universiteit Utrecht

PROMOTIECOMMISSIE

Prof. dr. T. Hernandez-Boussard	Stanford University
Prof. dr. M.A. van Buchem	
Dr. B. Van Calster	Katholieke Universiteit Leuven
Dr. M. van Smeden	Universiteit Utrecht

“Nothing in life is to be feared, it is only to be understood.” – Marie Curie

TABLE OF CONTENTS

1.	Introduction	9
PART I	Perspectives on methods for clinical artificial intelligence prediction algorithms	21
2.	Guidelines and quality criteria for artificial intelligence-based prediction models in healthcare: a scoping review	23
3.	Perspectives on validation	71
PART II	Development and validation: use cases	107
4.	Machine learning for developing a prediction model of hospital admission of emergency department patients: Hype or hope?	109
5.	Machine learning did not beat logistic regression in time series prediction for severe asthma exacerbations	135
6.	Feasibility of machine learning and competing risk analysis algorithms to predict outcomes from the Dutch Arthroplasty Register	159
7.	Predicting depression risk in patients with cancer using multimodal data	187
8.	Predicting readmission or death after discharge from the ICU: External validation and retraining of a machine learning model	221
PART III	General discussion and summary	251
9.	General discussion	253
10.	Summary written together with GPT-3 [1]	275
11.	Samenvatting geschreven samen met GPT-3 [1]	281
	Publications	286
	Portfolio	288
	About the author	290
	Acknowledgments	291
