Resolving a bioindicator diatom species complex using genomic approaches for freshwater biomonitoring

Ph.D. Thesis at Leiden University, The Netherlands

The research described in this thesis was conducted at the Institute of Environmental Sciences (CML), Leiden University, BaseClear, and Naturalis Biodiversity Center, Leiden, the Netherlands. This thesis is a deliverable from H2020 MSCA-ITN-ETN 'Plant.ID' grant 765000.

Proefschrift

ter verkrijging van

de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus prof.dr.ir. H. Bijl,  
volgens besluit van het college voor promoties  
te verdedigen op dinsdag 17 oktober 2023

klokke 11:15 uur

door

Ozan Çiftçi

Promotor: Prof.dr. P.M. van Bodegom

Co-promotor: Prof.dr. B. Gravendeel (Radboud University/Leiden University)

Promotiecommissie: Prof.dr. A. Alverson (University of Arkansas)

Prof.dr. D. Mann (Royal Botanical Garden Edinburgh)

Dr. W.H.C.F. Kooistra (Stazione Zoologica Anton Dohrn)

Dr. K.A. Stewart

Prof.dr. M. Vijver

Prof.dr. N.J. de Voogd

# Contents of the thesis

CHAPTER 1 .....	1
General Introduction .....	1
1.1    Origins of diatoms and their life cycle .....	2
1.2    Diatom biomonitoring .....	3
1.3    Diatom systematics .....	4
1.4    Genome-scale approaches in diatom systematics .....	6
1.5    Application of molecular methods to diatom biomonitoring .....	7
1.6    Genome-scale approaches in biomonitoring .....	9
1.7    Study design and the use of the <i>Nitzschia</i> genus .....	10
1.8    Aims of this thesis .....	11
1.9    Outline of the thesis .....	12
CHAPTER 2 .....	15
DNA from water .....	15
2.1    Introduction .....	16
2.2    Detection of DNA from aquatic environments .....	17
2.2.1    Shedding .....	17
2.2.2    DNA degradation .....	18
2.2.3    Transportation, retention, and resuspension .....	18
2.3    Targeted approaches and community analyses using plant DNA from water .....	19
2.4    Experimental design .....	21
2.4.1    Sampling strategies: water collection, filtering, and transportation .....	23
2.4.2    DNA extraction .....	25
2.5    Conclusion and Prospects .....	25
CHAPTER 3 .....	27
Phylotranscriptomics reveals the reticulate evolutionary history of a widespread diatom species complex .....	27
3.1    Introduction .....	28
3.2    Materials & Methods .....	30
3.2.1    Sample collection and algal culturing .....	30
3.2.2    SEM imaging, morphometrics, and shape outline analysis .....	31
3.2.3    RNA extraction and transcriptome sequencing .....	31

3.2.4	Transcriptome assembly .....	32
3.2.5	Orthology inference and species tree reconstruction .....	33
3.2.6	Quantifying genealogical concordance .....	34
3.2.7	Phylogenetic network estimations and tests for introgression .....	34
3.3	Results .....	35
3.3.1	Morphometric data and valve outlines .....	35
3.3.2	Transcriptome assemblies, orthology inference, and species tree estimation ...	39
3.3.3	Gene tree concordance analyses, phylogenetic network inferences, and tests for introgression .....	40
3.4	Discussion .....	42
3.5	Supplementary Figures & Tables .....	47
CHAPTER 4 .....		49
Silica cell-wall associated proteins in <i>Nitzschia palea</i> Kützing (W. Smith 1856) mined from transcriptome data of ten strains .....		49
4.1	Introduction .....	50
4.2	Materials & Methods .....	52
4.2.1	Strains and data resources .....	52
4.2.2	Homology searches .....	53
4.2.3	Orthology inference and functional annotations .....	53
4.3	Results .....	54
4.4	Discussion .....	63
CHAPTER 5 .....		67
Genotyping by sequencing for estimating relative abundances of diatom taxa in mock communities .....		67
5.1	Introduction .....	68
5.2	Materials & Methods .....	70
5.2.1	Algal cultivation and preparation of mock communities .....	70
5.2.2	Light microscopy slide preparations and counts .....	71
5.2.3	DNA Extractions .....	72
5.2.4	GBS library preparation and sequencing .....	72
5.2.5	GBS data processing .....	73
5.2.6	Statistical analyses .....	73
5.3	Results .....	74
5.3.1	GBS library preparation and clustering .....	74
5.3.2	False positive and false negative detections .....	75
5.3.3	Relative abundance estimates across strains .....	76

5.3.4	Relative abundance estimates across mock samples .....	78
5.4	Discussion .....	78
5.4.1	GBS-based relative abundance estimates show stronger correlations than LM with mock abundances.....	79
5.4.2	GBS provides sufficient resolution for the detection of intraspecific hybrids...80	
5.4.3	The calibration procedure prevents biases related to gene copy number variation	80
5.4.4	msGBS compared to current quantitative molecular approaches .....	81
5.4.5	Implications of msGBS for biomonitoring .....	82
5.5	Conclusions .....	83
5.6	Supplementary Tables .....	84
CHAPTER 6 .....		91
General Discussion .....		91
6.1	Implications of resolving recently diverged lineages in diatom systematics .....	93
6.2	Genome-scale data are valuable resources for mining phylogenetic markers .....	95
6.3	Improving taxonomic resolution and scalability for molecular diatom biomonitoring	96
6.4	Improving quantification accuracy in diatom biomonitoring .....	101
6.5	Further recommendations for molecular diatom biomonitoring.....	102
6.6	Concluding Remarks .....	104
