A brief Curriculum Vitae:

Luisa Procházková was born in Prague on December 20, 1987. She attended the Nedvedovo náměstí School (Prague, Czech Republic) for her primary education from 1996 to 2005. Subsequently, from 2005 to 2008, she completed her high school diploma at the Gymnasium Botičská in Prague. During this time, she embarked on a one-year exchange student study trip to Alvin High School in Texas, USA. Luisa graduated from high school with honors (*cum laude*). In 2008, she began her Bachelor's degree at the University of Aberdeen, specifically in the Faculty of Life Sciences. She successfully earned a First-class degree in Psychology in 2012. In 2013, Luisa gained valuable hands-on experience by working at a psychiatric hospital in Prague (Bohnice), while also completing several statistical courses. In 2015, she earned her Master of Science degree in Brain and Cognitive Sciences from the University of Amsterdam, within the Faculty of Social and Behavioral Sciences. Following this, she worked as a research assistant at the clinical neuroscience lab at Monash University in Australia for a year, publishing two scientific articles.

Luisa began her Ph.D. studies in Cognitive Psychology at Leiden University's Faculty of Social Sciences in October 2016. In October 2018, she received the TACR grant to develop biofeedback-driven virtual reality training for clinical populations. The project was successfully completed in 2020 and has since been validated and integrated into clinical practice in the Czech Republic. During her doctoral studies, Luisa completed several accredited therapeutic trainings and currently serves as a therapist at the AdiCare psychiatric clinic in Prague. In addition to her therapeutic practice, she is actively involved in various research projects at the National Institute of Mental Health in the Czech Republic and Lisbon University.

Thesis Acknowledgement

This dissertation embodies the culmination of a journey in which many individuals have played an important role. While it is impossible to acknowledge them all, I am confident that those who have occupied a special place in my heart recognize the impact they have had on both my life and this academic odyssey. With appreciation, I would like to thank at least a selected few.

I am grateful to my supervisors, Professor Bernhard Hommel and Dr. Roberta Sellaro, for their invaluable guidance and support throughout this PhD project. Their unwavering passion for the topic and thoughtful discussions have been instrumental in shaping my academic path.

I owe a debt of gratitude to my dear sister Eliska, my parents, and friends Sebastian, Daniel, and Josephine. They have been my rocks, offering unwavering support during the most challenging of times, embracing me even when all I yearned for was to recline on a chair with a glass of wine. I am also thankful to Elio, Dominique, and Harry, who deserve credit as my steadfast companions from the outset of this research adventure. Your camaraderie and shared laughter made this journey not only bearable but also remarkably enjoyable.

I am also thankful to my colleagues Roel, Anna, Vera, and Saskia for their support and friendship. Their willingness to share their knowledge and expertise has been a great help and support in my research and beyond.

I must also extend my heartfelt appreciation to other members of the faculty. Mariska Krett, your timely entrance into my life and career has been transformative. Without your guidance and inspiration, I would not be where I stand today. To Michiel, Sander, and Guido, thank you for your exceptional support, invaluable guidance, and the opportunities you have generously provided.

Finally, I would like to acknowledge the financial support of the European Research Council (ERC) for making this research possible.
