# Publication List

Work presented in this thesis:

1. **Y. Shelke**, S. Marín-Aguilar, F. Camerin, M. Dijkstra, and D. J. Kraft, “Exploiting anisotropic particle shape to electrostatically assemble colloidal molecules with high yield and purity,” *J. Colloid Interface Sci.*, 629, 322–333, 2023. [**Chapter 2**]
2. **Y. Shelke**, F. Camerin, S. Marín-Aguilar, R. W. Verweij, M. Dijkstra, and D. J. Kraft, “Flexible colloidal molecules with directional bonds and controlled flexibility,” *ACS Nano*, 17, 13, 12234–12246, 2023. [**Chapter 3**]
3. **Y. Shelke**, D. J. Pearce, and D. J. Kraft, “Self-assembly of flexible colloidal lattices,” *In preparation*. [**Chapter 4**]

Other publications:

1. R. W. Verweij, **Y. Shelke**, and D. J. Kraft, “Valence control through linker mobility,” *In preparation*.
2. **Y. Shelke**, N. R. Srinivasan, S. P. Thampi, and E. Mani, “Transition from linear to circular motion in active spherical-cap colloids,” *Langmuir*, 35, 13, 4718–4725, 2019.
3. **Y. Shelke**, M. Sabapathy, and E. Mani, “Staggered linear assembly of spherical-cap colloids,” *Langmuir*, 33, 27, 6760–6768, 2017.
4. M. Sabapathy, **Y. Shelke**, M. G. Basavaraj, and E. Mani, “Synthesis of non-spherical patchy particles at fluid–fluid interfaces via differential deformation and their self-assembly,” *Soft Matter*, 12, 5950–5958, 2016.

# About the author

I completed my B.Tech in Chemical Technology from Amravati University in 2013. Following this, I pursued an M.S. in Chemical Engineering at the Indian Institute of Technology in Madras, India, which I completed in 2017. Under the guidance of Prof. Ethayaraja Mani, my master's thesis was focused on the self-assembly of spherical-cap colloids. Subsequently, I continued my research as a Senior Research Fellow at IIT Madras, where I worked on a project titled "Self-propelling spherical-cap colloids." In 2019, I began my Ph.D. studies at Leiden University in the Netherlands. Under the guidance of Prof. Daniela J. Kraft, my doctoral research explored the self-assembly of flexible and rigid structures, ranging from colloidal molecules to lattices.

During my academic journey, I have attended several conferences and workshops. Noteworthy presentations of mine include talks on rigid and flexible colloidal molecules at the International Soft Matter Conference and the APS March Meeting, as well as poster presentations at the NWO Physics and Dutch Soft Matter Meeting. I've also enriched my knowledge by attending workshops such as the Han sur Lesse WinterSchool in Belgium and the Frontiers of Nanoscience Winter Retreat in France.

In addition to research, I've taken pleasure in teaching as an assistant for various undergraduate courses at both Leiden University and IIT Madras. I have also had the privilege of co-supervising research projects for both bachelor's and master's students on flexible colloidal structures. In the future, I aim to continue my academic journey and conduct research in a related field.

# Acknowledgement

I would like to express my gratitude for the invaluable contributions and support I received from those who journeyed alongside me during this research. First and foremost, my sincere appreciation to my advisor, Daniela. Her wisdom, guidance, and unwavering support have been invaluable throughout my Ph.D. journey. Her patient mentorship and deep knowledge have significantly shaped both my professional and personal growth. I want to thank my collaborators Fabrizio Camerin, Susana Marín-Aguilar, and Marjolein Dijkstra for their contributions to the computational part of this thesis work. My gratitude extends to Daniel J.G. Pearce for our fruitful discussions and his valuable suggestions.

I express my thanks to Rachel for her consistent assistance in the lab during my Ph.D. journey. My gratitude goes to the Fine Mechanical Department (FMD) lab for designing accessories and to Ruud Kuyvenhoven for his technical support. I also thank Danielle for administrative help. I'd also like to acknowledge my fellow researchers: Ruben, Melissa, Samia, Stefenia, Ali, Julio, Solenn, Silvana, Mengshi, Anna, Thijs, Karina, Nick, Amitesh, Samadarshi, Lenard, Colin, Margot, Alexandre, Martin and others whose names I might have unintentionally missed. Our stimulating discussions, both on scientific matters and general topics during group meetings, seminars, lab outings, lunches and coffee breaks, have greatly enriched my recent years. Further, I extend my thanks to my students, Yahel and Jaro for their valuable contributions to my understanding of this work.

My parents and family have consistently provided love and support. I am deeply grateful for their belief in me throughout my life. I also want to express my appreciation to my brother Amol, and my friends Ribhu and Mukesh for their constant support, encouragement and belief in me. Lastly, this journey would not have been possible without my wife, Madhura. Her understanding, encouragement and companionship have turned both the highs and lows of this journey into cherished memories.
