The work presented in this thesis was carried out at the Department of Anatomy & Embryology of the Leiden University Medical Center, and supported by a Starting Grant (STEMCARDIORISK) from the European Research Council (ERC) under the European Union's Horizon 2020 Research and Innovation programme [H2020 European Research Council; grant agreement #638030], a VIDI fellowship from the Netherlands Organisation for Scientific Research [Nederlandse Organisatie voor Wetenschappelijk Onderzoek NWO; ILLUMINATE; #91715303], a Marie Skłodowska-Curie Individual Fellowship [H2020-MSCA-IF-2017; #795209] and a Novo Nordisk Foundation grant [reNEW; NNF21CC0073729].

Cardiomyocytes from human induced pluripotent stem cells: capturing disease severity of LQT2 syndrome and the impact of chromosome aberrations

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 24 oktober 2023
klokke 11:15 uur

door

Karina de Oliveira Brandão
geboren te Guarulhos, Brazilië
in 1985

Promotor:

Prof. dr. C.L. Mummery

Co-Promotor:

Dr. R.P.Davis

Promotiecommissie:

Prof. dr. M.J.T.H. Goumans

Prof. dr. M.C. de Ruiter

Prof. dr. D. Salvatori (Utrecht University)

Prof. dr. B. van de Water (Leiden University)

To every laugh that wanted to be
To my love who always was, and
To my family and friends who kept me.

Contents

Chapter 1	9
General introduction and thesis outline.	
Chapter 2	25
Human pluripotent stem cell models of cardiac disease and their therapeutic implications.	
Chapter 3	71
Crispr/Cas9-mediate introduction of specific heterozygous mutations in human induced pluripotent stem cells.	
Chapter 4	103
Isogenic sets of hiPSC-CMs harbouring distinct <i>KCNH2</i> mutations differ functionally and in susceptibility to drug-induced arrhythmias.	
Chapter 5	149
The linkage phase of the polymorphism <i>KCNH2</i> -K897T influences the electrophysiological phenotype in hiPSC models of LQT2.	
Chapter 6	189
Investigating the molecular consequences of <i>KCNH2</i> compound mutations in hiPSC-derived cardiomyocytes.	
Chapter 7	219
Gain of chromosome region 1q31.3 in human iPSCs confers growth advantage and alters contraction in derivative cardiomyocytes.	
Chapter 8	252
