CURRICULUM VITAE

Léonie Petitclerc was born on the 12th of July 1991 in Gatineau, Canada. Early on in her education, she developed a fascination for the sciences. In 2010, she went on to study Physics at the University of Montréal (UdeM), and in 2013 was awarded a bachelor's degree with a specialization in subatomic Physics and radiation-matter interactions. During that time, she took an introductory course to Medical Physics that sparked her interest for magnetic resonance imaging. She pursued her education as a master's student at the UdeM in the field of Medical Physics. She completed her master's degree in 2015 with the project "Using surgical clips in the tracking of liver tumors applied to CyberKnife SBRT treatments" in collaboration with the radiotherapy department of the University Medical Center of the UdeM (Centre Hospitalier de l'Université de Montréal – CHUM).

Wanting to focus her attention towards the field of MRI, in 2015 Léonie joined the group of Dr An Tang at the CHUM, first as part of an internship and then as a research assistant, until the end of 2016. Under the supervision of Dr Tang and Guillaume Gilbert, she studied an array of MRI methods for imaging of liver fibrosis and liver tumours.

Léonie maintained her interest for MRI but wanted to go deeper in her understanding of the modality by working on programming imaging sequences. She looked for opportunities for PhD projects and was attracted to the thriving MRI research community of the Netherlands. She began her doctoral degree at the C.J. Gorter MRI Center of the Leiden University Medical Center in 2017 under the supervision of Professor Matthias van Osch, with the goal of developing new arterial spin labeling techniques for water exchange imaging in the human brain. As of 2023 Léonie has moved back to Montréal and is looking to work as a Physics teacher at the collegiate level.

ACKNOWLEDGEMENTS

In my time as a PhD student at the LUMC I have met many wonderful people who have been a vital source of inspiration and support. While I enjoyed my time in the Netherlands, these years have brought some difficult challenges into my life and I would not have made it without their help.

First and foremost I would like to express my deepest gratitude to Thijs, you have been the greatest supervisor a PhD student could hope for. You have an incredible capacity to make time in your busy schedule to accompany your students with their research, even on a daily basis, and I always knew that I could count on you for a quick brainstorming session when I struggled to make progress. I admire your continued passion and commitment for research, not only are you talented as a researcher, but also as a manager, a quality that is oftentimes overlooked in the sciences.

I am lucky to have been part of our tight-knit Gorter family, which has brought so much to my social life, and made me feel welcome as I was starting a new life in a new country. Not every research group meets for lunch every day and drinks every Friday, but at the Gorter students and professors alike join in, and it creates an atmosphere of inclusion and good vibes that are unmatched.

Every week I looked forward to exchanging ideas with Thijs's research group at the ASL Journal Club. I would like to thank club members Lydiane, Sophie, Suzanne, Lena, Merlijn, Jasmin, Daniëlle, Barbara, Emiel, and both Thijs's for the always stimulating questions and discussions. I appreciate the restraint that Thijs showed at these meetings by taking a backseat and letting the rest of us discuss amongst ourselves before intervening so that he would not dominate the conversation. This created an environment that was very conducive to exchange and learning and made me feel like a Greek philosopher at the Agora.

I want to thank my office mates from the man-cave and my friends from the Gorter Center who made daily life so much more enjoyable in the times when we were not working from home.

In particular, I would like to thank Lydiane. Working with you was very gratifying. You are such a smart person and an amazing scientist, and I hope that you realize that. Our brainstorming sessions were so fun and engaging and they were greatly valuable to my research. Your talent for data analysis helped me out of many impasses. But above our scientific collaboration, I deeply value our friendship. You were always there to talk to and offer your support. I cherished our coffee breaks where we could talk about anything, and share the

latest gossip. Thank you also for regularly inviting me into your home for dinners where you would spoil me with your delicious cooking and unmatched baking skills.

Celine, although our time both living in Leiden was short, you have left a big impact on my life. I feel privileged to count you as one of my friends. Your perseverance, your dedication, and your humour through it all are an inspiration, and you are someone I can look up to.

To my very dear friend Jedrek, thank you so much, for everything. Your warm presence has meant the world to me during this time. You were there for me in the moments I needed it the most. I could always come to you for anything from a fun hang out, to words of wisdom, to an emotional support emergency. You have made me feel safe, loved, and supported. You are a true friend.

Thank you also to Claire and Malik, two of the most lovely people I know. Growing our friendship during your stay in Europe was a beautiful experience that gave me strength in difficult times and our trips were a much needed breath of fresh air.

Of course none of this would have been possible without the continuing and unconditional support of my family, in particular my parents René and Martine. They are the ones who instilled in me the thirst for knowledge and the value of education. They have always pushed me to better myself, while also letting me grow into my own person. *Merci papa et maman.*

After my time as an expat I now feel I have a family at home as well as abroad. As I am moving on to another chapter in my life, it brings me sadness to say goodbye my European family, but I know we will meet again in our travels.
