## **CURRICULUM VITAE**

Jessie Simone Kroonen was born on 8<sup>th</sup> of December 1993 in Venray, the Netherlands. She graduated from her high school education at Metameer Stevensbeek in 2012. Jessie conducted her bachelor's and masters's education in Nutrition and Health at Wageningen University & Research (WUR, Wageningen). She obtained her bachelor's degree Nutrition & Health in 2015, followed by her master's degree specialized in Molecular Nutrition and Toxicology in 2017. Jessie developed a keen interest in the development and analysis of novel therapeutic strategies during her master thesis work in the group of prof. dr. Renger Witkamp, where she researched the anti-inflammatory properties of antidepressant herbs and molecules. For her masters internship Jessie joined the group of dr. Martin Kaczocha at Stonybrook University, New York, USA. Her internship research focused on the role of Fatty Acid Binding Proteins in prostate cancer aggressiveness. In October 2017, she started her scientific career at the department of Cell & Chemical Biology at the Leiden University Medical Centre in the Netherlands under guidance of prof. dr. Alfred Vertegaal. In her PhD research, she focused on the role of SUMOylation in cancer development and researched a novel SUMOylation inhibitor as a strategy for cancer therapy. In February 2023, Jessie joined the group of prof. dr. Madelon Maurice at the UMC Utrecht the Netherlands as a post-doctoral researcher on the project of the start-up company Laigo Bio, to repurpose membrane E3 ligases for targeted protein degradation. She continues to translate fundamental science for clinical advances.

## **DANKWOORD**

The book is written, and the last chapter closed. I look back at a great time and unique experience in my life. The past years had many highs and some lows. I am grateful for all the people that joined me on this journey.

First, I would like to thank Alfred for the guidance as my promotor. Your door was literally always open for questions and discussion.

Thank you to Peter ten Dijke as my co-promoter, and David Baker and Judith Boveé as my guidance committee for the yearly fruitful discussions and support.

CCB department 2<sup>nd</sup> floor you know who you are thank you for all the support.

Mirjam Heemskerk for our collaboration and teaching me all about T cell therapy, big thank you to your lab, Anne by my side on two big projects or three counting our tiling adventure, Miranda, Tassilo, Sietse, Celia, Dennis and Willemijn to make me feel most welcome.

Thanks to all the SUMO wrestlers who I enjoyed working with and all the after-hours fun, Nila, Ilona, Richa, Roman, Linda, Sumit, Sabine and Frauke. Thank you to Irene and Federica who as students worked with me on multiple projects.

Matty you are an amazing person and were a great support during my PhD. I wish you all the best for your retirement and hopefully many adventures.

Edwin I will always remember our mornings in the lab with a coffee discussing science and life, how our lives develop surprisingly parallel until yours so sadly ended. You will be remembered.

Nicolette, Laura, Fredrik and Daniel we have experienced so many highs and lows together in the lab. I am very thankful that you were there, we had so much fun and supported each other through tough times. I wish you all the best and can only imagine the wonderful things you will embark on in your careers and life.

To my paranymp Tamara you were there on my first day and soon after I knew you had to be there at the end as my paranymp. I learned so much from you in that first year we were together in the lab. I was so sad seeing you go; however, I believe that our friendship became even better after that. I love the trips we make visiting each other, together with Jurgen and Martijn. I am impressed and proud of you for choosing your own path.

To my paranymp Jannie we met during our studies and since then developed a great friendship. We think alike, show up with the same fashion items although we differ so much in height and started our PhD at the same time. What a track record, however the most important is that we support each other in science and life. I am very happy that you are also my paranymp.

De Miepjes, Jannie, Iris, Laurien en Romy ik ben zo trots op ons hoe wij na onze studie samen allemaal onze eigen doelen aan het behalen zijn. Bij jullie voel ik me altijd gehoord aangezien jullie precies weten waar ik mee bezig ben.

Sofie, Minke, Pleuni en Maxiëm ik vind het fantastisch dat wij allemaal onze eigenweg hebben gekozen en ondanks onze verschillende interesses elkaar aanmoedigen en steunen.

Johnny, Brigitte, Ruben, Elora, Joris en Mieke, dankjewel voor jullie interesse en support tijdens mijn promotie traject.

Papa en mama jullie hebben mij geleerd om altijd nieuwsgierig te zijn, van jongs af werd er over verschillende onderwerpen gediscussieerd en altijd vragen gesteld alsof we in een Quiz leefden. Dit heeft er onbewust toe geleid dat ik het pad van het onderzoek heb gekozen net zoals jullie. Dankjewel voor het voorbeeld dat jullie geven door altijd integer om te gaan met onderzoek en hoe jullie zijn als persoon.

Camiel jij koos hetzelfde pad van de wetenschap, in een ander veld en ander land, maar toch zoveel dezelfde obstakels en successen. Ik vond het heerlijk om tijdens onze telefoongesprekken over en weer elkaar te ondersteunen in ons promotie traject. Samen met Ariane ben je er altijd geweest om successen te vieren en ons te verwelkomen op de vele tripjes naar Basel om even te ontspannen. Nu op naar in de toekomst Dr. Kroonen<sup>2</sup>.

Stan grote kleine broer, jij hebt helemaal niks met de wereld waar ik in werk. Jouw ontnuchterende opmerkingen plaatsen alles in perspectief, dankjewel voor je support.

Martijn jij was er op de eerste dag dat ik aan dit avontuur begon en had geen idee wat ons allemaal te wachten stond, maar goed ook. Ik ben zo dankbaar dat jij er bent als mijn support, onze compressor momentjes waren van cruciaal belang voor het slagen van mijn PhD. Ik ben ook ontzettend trots op wat jij de afgelopen jaren hebt bereikt, naast mijn onrustige bestaan als PhD student. Ik kan niet wachten op alle avonturen die wij nog gaan beleven.
