# Computational speedups and learning separations in quantum machine learning

Proefschrift

ter verkrijging van  
de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus prof. dr. ir. H. Bijl,  
volgens besluit van het college voor promoties  
te verdedigen op donderdag 4 april 2024  
klokke 11.15 uur

door

Casper Ferenc Sàndor Gyurik

geboren te Elst

in 1994

**Promotores:**

Prof. dr. V. Dunjko

Prof. dr. A. Plaat

**Promotiecommissie:**

Prof. dr. T.H.W Bäck

Prof. dr. M.M. Bonsangue

Prof. dr. J. Calsamiglia Costa (Universitat Autònoma de Barcelona)

Dr. S. Jeffery (Centrum Wiskunde & Informatica)

Dr. A.W. Laarman

# Contents

<b>Acknowledgements</b>	vii
<b>1 Introduction</b>	1
1.1 Problem statement and research questions . . . . .	1
1.2 List of contributions . . . . .	3
<b>2 Background and definitions</b>	6
2.1 Quantum computing . . . . .	6
2.1.1 Basics of quantum algorithms . . . . .	10
2.1.2 Quantum complexity theory . . . . .	13
2.1.3 Quantum linear classifiers . . . . .	15
2.2 Topological data analysis . . . . .	18
2.2.1 Betti numbers as features . . . . .	18
2.2.2 Quantum algorithm for Betti number estimation . . . . .	21
2.2.3 Classical algorithms for Betti number estimation . . . . .	26
2.3 Structural risk minimization . . . . .	27
2.4 Reinforcement learning . . . . .	31
2.5 Computational learning theory . . . . .	33
2.5.1 Learning separations in the PAC learning framework . . . . .	33
2.5.2 Complexity theory . . . . .	39
<b>3 Towards quantum advantage via topological data analysis</b>	44
3.1 Problem definitions . . . . .	44
3.1.1 Relationships between the problems . . . . .	48
3.2 Classical intractability of LLSD . . . . .	49
3.2.1 The one clean qubit model of computation . . . . .	51
3.2.2 Hardness of LLSD for the one clean qubit model . . . . .	51
3.2.3 Closing the gap for classical intractability of ABNE . . . . .	53
3.2.4 Graphs with quantum speedup . . . . .	55
3.3 Quantum speedups beyond Betti numbers . . . . .	59
3.3.1 Numerical rank estimation . . . . .	59
3.3.2 Combinatorial Laplacians beyond Betti numbers . . . . .	62
3.4 Possibilities and challenges for implementations . . . . .	66

<b>4 Structural risk minimization for quantum linear classifiers</b>	<b>70</b>
4.1 Complexity of quantum linear classifiers . . . . .	70
4.2 Expressivity of quantum linear classifiers . . . . .	74
4.3 Structural risk minimization in practice . . . . .	76
<b>5 Parametrized quantum policies for reinforcement learning</b>	<b>81</b>
5.1 Parametrized quantum policies . . . . .	81
5.1.1 The RAW-PQC and SOFTMAX-PQC policies . . . . .	81
5.1.2 Learning algorithm . . . . .	83
5.1.3 Efficient policy sampling and policy-gradient evaluation . . . . .	84
5.2 Performance comparison in benchmarking environments . . . . .	85
5.2.1 RAW-PQC v.s. SOFTMAX-PQC . . . . .	85
5.2.2 Influence of architectural choices . . . . .	87
5.3 Quantum advantage of PQC agents in RL environments . . . . .	87
5.3.1 Quantum advantage of PQC agents over classical agents . . . . .	88
5.3.2 Quantum advantage of PQC agents over DNN agents . . . . .	89
<b>6 Exponential separations between classical and quantum learners</b>	<b>92</b>
6.1 Learning separations with efficient data generation . . . . .	93
6.1.1 A learning separation based on a worst-case to average-case reduction . . . . .	94
6.1.2 A learning separation based on obfuscation . . . . .	95
6.1.3 A learning separation with efficiently evaluable concepts . . . . .	97
6.1.4 A learning separation with a fixed hypothesis class . . . . .	99
6.2 Learning separations without efficient data generation . . . . .	100
6.2.1 Learning separations from physical systems . . . . .	103
6.3 Connections to other works on (quantum) learning tasks . . . . .	104
6.3.1 Provably efficient machine learning with classical shadows . . . . .	105
6.3.2 Power of data . . . . .	106
6.3.3 Physically-motivated PAC learning settings with fixed hypothesis classes . . . . .	107
<b>7 Conclusion</b>	<b>110</b>
7.1 Research overview . . . . .	110
7.2 Limitations . . . . .	112
7.3 Future work . . . . .	112
<b>Bibliography</b>	<b>114</b>
<b>Summary</b>	<b>128</b>
<b>Samenvatting</b>	<b>130</b>
<b>Curriculum Vitae</b>	<b>133</b>

## Appendix 133

<b>A Towards quantum advantage via topological data analysis</b>	<b>134</b>
A.1 LLSD is DQC1-hard . . . . .	134
A.2 Quantum algorithms for SUES and LLSD . . . . .	137
A.2.1 Quantum algorithm for SUES . . . . .	137
A.2.2 Quantum algorithm for LLSD . . . . .	139
A.3 Betti number and spectral gap calculations . . . . .	143
A.4 SWES is DQC1-hard . . . . .	144
<b>B Structural risk minimization for quantum linear classifiers</b>	<b>146</b>
B.1 Proofs of Section 4.1 . . . . .	146
B.1.1 Proofs of Proposition 12 and Lemma 13 . . . . .	146
B.1.2 Relationship Proposition 12 and ranks of observables . . . . .	147
B.1.3 Proof of Proposition 14 . . . . .	149
B.2 Proofs of propositions Section 4.2 . . . . .	151
B.2.1 Proof of Proposition 15 . . . . .	151
B.2.2 Proof of Proposition 16 . . . . .	157
B.2.3 Proof of Proposition 17 . . . . .	158
<b>C Parametrized quantum policies for reinforcement learning</b>	<b>160</b>
C.1 Derivation of the log-policy gradient . . . . .	160
C.2 Efficient implementation of SOFTMAX-PQC policies . . . . .	160
C.2.1 Efficient approximate policy sampling . . . . .	160
C.2.2 Efficient estimation of the log-policy gradient . . . . .	161
C.3 Role of trainable observables in SOFTMAX-PQC . . . . .	163
C.3.1 Training the eigenbasis and the eigenvalues . . . . .	163
C.3.2 The power of universal observables . . . . .	163
C.4 Environments specifications and hyperparameters . . . . .	164
C.5 Deferred plots and shape of policies PQCs vs. DNNs . . . . .	165
C.5.1 Influence of architectural choices on RAW-PQC . . . . .	165
C.5.2 Shape of the policies learned by PQCs v.s. DNNs . . . . .	168
C.5.3 Additional simulations on CognitiveRadio . . . . .	168
C.6 Supervised learning task of Liu <i>et al.</i> . . . . .	172
C.7 Proof of Theorem 20 . . . . .	172
C.8 Proof of Lemma 46 . . . . .	175
C.8.1 Upper bound on the value function . . . . .	176
C.8.2 Lower bound on the value function . . . . .	177
C.8.3 Bounds on classical- vs. and quantum- learnability . . . . .	177
C.9 Proof of Lemma 47 . . . . .	179
C.9.1 Proof of classical hardness . . . . .	179
C.9.2 Proof of quantum learnability . . . . .	181
C.10 Construction of PQC agent for the DLP environments . . . . .	181
C.10.1 Implicit vs. explicit quantum SVMs . . . . .	182
C.10.2 Description of the PQC classifier . . . . .	182
C.10.3 Noisy classifier . . . . .	183

C.11 Proof of trainability of PQC agent in the SL-DLP . . . . .	184
<b>D Exponential separations between classical and quantum learners</b>	<b>189</b>
D.1 Details regarding definitions . . . . .	189
D.1.1 Constraining hypothesis classes to those that are efficiently eval- uatable . . . . .	189
D.1.2 Proof of Lemma 3 . . . . .	189
D.1.3 Proof of Lemma 4 . . . . .	190
D.2 Proof of Theorem 24 . . . . .	191
D.2.1 Discrete cube root assumption for moduli of Definition 19 . .	193
D.3 Proof of Theorem 25 . . . . .	194
D.4 Proof of Theorem 26 . . . . .	195
D.4.1 Proof of Lemma 27 . . . . .	196
D.4.2 Proof of Lemma 28 . . . . .	197
D.5 Proof of Theorem 30 . . . . .	197

# Acknowledgements

Firstly, I want to express my gratitude to my supervisor Vedran Dunjko for being a continuous driving force in my development. Every interaction I had with Vedran made me feel that his sole purpose was to help me improve in everything I wanted to achieve. Our meetings ranged from challenging to enlightening and roundabout fun, and I will truly miss these interactions.

After work, I was able to fully unwind and enjoy my off hours, thanks to the incredible warmth I felt at home from my dear partner Sophie. Being able to share my life with such a driven and outgoing person who also knows how to appreciate things beyond work was both inspiring and enabled me to enjoy so much of what life has to offer.

I want to express my gratitude to my parents, Andor & Marjolijne, and my brother Lucas for providing me with a solid foundation of love and support. Without the love and effort my parents put into providing me with the opportunities that were given to me, none of the life I currently enjoy would have been possible. It was great experiencing how proud my parents and my brother always were of me, which always motivated me to be even better.

I want to say thank you to my friends Marty, Coenen, Sjawty, and Spitter for our wonderful adventures, from Saint Petersburg to Lake Balaton and the Ruk & Pluk. Also, I want to say thank you to the players and staff of AFC Ajax (with a special thanks to Dušan Tadić, Hakim Ziyech, and Erik ten Hag) for winning the Eredivisie all four years of my PhD and for their 2018/2019 Champions League run, providing me with blissful distractions from work.
