The challenge of quality assessment and regional perfusion to increase donor organ utilisation

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 15 mei 2024
klokke 15.00 uur

door

Fenna Eline Marlijn van de Leemkolk

Table of Contents

Chapter 1	General introduction, thesis outline and rationale	7
Part I	Improving quality assessment of donor organs	27
Chapter 2	Transplantation of kidneys from donors with acute kidney injury: Friend or foe?	29
Chapter 3	Is it possible to identify a predictive proteomic signature of Primary Non-Function (PNF) of a donor kidney prior to transplantation: A proof-of-concept study	49
Chapter 4	The role of flavin mononucleotide (FMN) as a potentially clinically relevant biomarker to predict the quality of kidney grafts during hypothermic (oxygenated) machine perfusion	69
Chapter 5	Quantification of unmethylated insulin DNA using methylation sensitive restriction enzyme digital polymerase chain reaction	93
Part II	Optimisation of organ preservation strategies	113
Chapter 6	Abdominal normothermic regional perfusion in donation after circulatory death: A systematic review and critical appraisal	115
Chapter 7	Donor eligibility criteria and liver graft acceptance criteria during normothermic regional perfusion: A systematic review	157
Part III		183
Chapter 8	Summary, future perspectives and conclusion	185
Chapter 9	Dutch summary (Nederlandse samenvatting)	201
Appendices	List of Abbreviations	216
	Curriculum Vitae	218
	List of Publications	219
	Acknowledgements (Dankwoord)	220
