## Table of Contents

Chapter 1	General introduction, thesis outline and rationale	7
<b>Part I</b>	<b>Improving quality assessment of donor organs</b>	<b>27</b>
Chapter 2	Transplantation of kidneys from donors with acute kidney injury: Friend or foe?	29
Chapter 3	Is it possible to identify a predictive proteomic signature of Primary Non-Function (PNF) of a donor kidney prior to transplantation: A proof-of-concept study	49
Chapter 4	The role of flavin mononucleotide (FMN) as a potentially clinically relevant biomarker to predict the quality of kidney grafts during hypothermic (oxygenated) machine perfusion	69
Chapter 5	Quantification of unmethylated insulin DNA using methylation sensitive restriction enzyme digital polymerase chain reaction	93
<b>Part II</b>	<b>Optimisation of organ preservation strategies</b>	<b>113</b>
Chapter 6	Abdominal normothermic regional perfusion in donation after circulatory death: A systematic review and critical appraisal	115
Chapter 7	Donor eligibility criteria and liver graft acceptance criteria during normothermic regional perfusion: A systematic review	157
<b>Part III</b>		<b>183</b>
Chapter 8	Summary, future perspectives and conclusion	185
Chapter 9	Dutch summary (Nederlandse samenvatting)	201
Appendices	List of Abbreviations	216
	Curriculum Vitae	218
	List of Publications	219
	Acknowledgements (Dankwoord)	220
