Automated Machine Learning for Dynamic Energy Management using Time-Series Data

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 28 mei 2024
klokke 12:30 uur

This work is part of the research programme *C2D–Horizontal Data Science for Evolving Content*, under the DACCOMPLI project (project number 628.011.002), which is partly financed by the Netherlands Organisation for Scientific Research (NWO).

Acknowledgments

Completing this PhD thesis has been an incredibly rewarding journey, and I owe a debt of gratitude to numerous individuals who have supported and guided me along the way.

First and foremost, I extend my deepest appreciation to my supervisor, Prof. Holger Hoos. His expertise, mentorship, and unwavering support have been invaluable throughout the entirety of this research endeavor. His insights, encouragement, and constructive feedback have not only shaped the direction of this thesis but have also played a pivotal role in my intellectual growth and development as a researcher.

I am also immensely grateful to Prof. Thomas Bäck for his guidance, encouragement, and scholarly contributions to the field of machine learning. His expertise in optimization and his commitment to advancing the frontiers of AI have been a source of inspiration and motivation. His mentorship has challenged me to think critically, push the boundaries of knowledge, and strive for excellence in all aspects of my research.

Furthermore, I extend my heartfelt thanks to Dr. Mitra Baratchi for her invaluable guidance, support, and insightful perspectives throughout this journey. Her expertise in spatio-temporal data Analysis has enriched the conceptual framework of this thesis and has contributed significantly to its theoretical coherence and scholarly rigor. Her mentorship has been characterized by a profound dedication to fostering intellectual curiosity and a commitment to excellence in research.

Additionally, I extend my appreciation to Dr. Markus Olhofer and Dr. Steffen Limmer from the Honda Research Institute Europe for their support, collaboration, and contributions to this research. Their expertise and insights have enriched the empirical analysis and practical applications of this thesis, and the collaboration has been invaluable.

In addition to my academic mentors, I would like to express my sincere gratitude to my boyfriend George Qiao for his unwavering love, encouragement, and support. His

patience, understanding, and unwavering belief in my abilities have been a constant source of strength and inspiration throughout this process. His presence in my life has provided me with the balance, perspective, and emotional support needed to navigate the challenges of doctoral research with resilience and determination.

Lastly, I extend my gratitude to the entire academic community at LIACS and Honda Research Institute Europe for providing a stimulating environment for intellectual growth and inquiry. The collaborative spirit, scholarly exchanges, and interdisciplinary collaborations have enriched my academic experience and have contributed to the richness and depth of this thesis.

In conclusion, the completion of this thesis is a testament to the collective efforts and support of the aforementioned individuals. Their guidance, encouragement, and unwavering belief in my potential have been instrumental in this scholarly endeavor, and for that, I am deeply grateful.

Contents

Acknowledgments	iii
1 Introduction	1
1.1 Background	1
1.2 Research questions	3
1.3 Outline	4
1.4 Contributions of this thesis	4
2 Preliminaries	7
2.1 Time-series forecasting	7
2.2 Dynamic energy management	7
2.2.1 Data characteristics	8
2.2.2 Methodology	9
2.2.3 Evaluation measures	10
2.2.4 Conclusions	11
3 Automated machine learning	13
3.1 Automated machine learning problem definitions	13
3.2 Hyperparameter optimisation	16
3.2.1 Search spaces	16
3.2.2 Search strategy	16
3.2.3 Performance evaluation techniques	28
3.2.4 HPO systems and libraries	34
3.3 Neural architecture search	36
3.3.1 Search space	40
3.3.2 Search strategy	45
3.3.3 Performance evaluation in NAS	58

Contents

3.3.4	NAS systems and libraries	61
3.3.5	NAS benchmarks	63
3.4	Broad-spectrum automated machine learning systems	65
3.4.1	Systems based on random search and grid search	69
3.4.2	Systems based on Bayesian optimisation	70
3.4.3	Systems based on multi-armed bandits	72
3.4.4	Systems based on evolutionary algorithms	73
3.4.5	Systems based on Monte Carlo tree search	75
3.4.6	Systems based on other methods	76
3.4.7	Selecting an AutoML system	78
3.5	Conclusion	79
4	Applications in dynamic energy management	81
4.1	Introduction	81
4.2	Related work	83
4.3	Method	83
4.3.1	Auto-sklearn	83
4.3.2	TPOT	85
4.4	Experimental setup and data sets	87
4.5	Results	89
4.5.1	Comparing AutoML against manually configured models . . .	90
4.5.2	Comparing auto-sklearn and TPOT	93
4.6	Conclusion	96
5	AutoML for single-step forecasting	99
5.1	Introduction	99
5.2	Related work	100
5.3	Problem definition	103
5.4	Methods	103
5.4.1	Auto-sklearn	104
5.4.2	Tsfresh	105
5.4.3	AutoML for time-series forecasting	105
5.5	Empirical results	106
5.6	Conclusion	126

6	AutoML for multi-step time-series forecasting	129
6.1	Introduction	129
6.2	Related work	130
6.3	Problem statement	131
6.3.1	AutoML for multi-step time-series forecasting	132
6.4	Methodology	132
6.4.1	Multi-step forecasting	132
6.4.2	Auto-Sklearn with time-series feature engineering	133
6.5	Empirical results	134
6.5.1	Data sets	134
6.5.2	Experimental setup	135
6.5.3	Baselines	137
6.5.4	Our methods	138
6.5.5	Research questions	138
6.6	Conclusion	139
7	Conclusions and future work	141
7.1	Summary	141
7.2	Future work	143
	Bibliography	149
	List of publications	182
	Summary	183
	Samenvatting	184
	Curriculum Vitae	185
