Counting curves and their rational points

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 12 juni 2024
klokke 10:00 uur

door

Pim Spelier
geboren te Utrecht, Nederland
in 1999

Promotores:

Prof.dr. D.S.T. Holmes

Prof.dr. R.M. van Luijk

Prof.dr. S.J. Edixhoven †

Promotiecommissie:

Prof.dr. J.S. Balakrishnan (Boston University)

Prof.dr.ir. G.L.A. Derks

Dr. L.S. Herr

Prof.dr. D. Ranganathan (University of Cambridge)

Prof.dr. J.B. Vonk

Contents

1	Introduction	5
1.1	Moduli spaces of curves and intersection theory	5
1.2	Logarithmic moduli spaces	8
1.3	Chabauty's method	12
2	Polynomiality of the double ramification cycle	17
2.1	Introduction	17
2.2	Definitions	19
2.3	Pixton's formula for the double ramification cycle	20
2.4	Sums over weightings	21
2.5	Polynomiality of the DR cycle	28
3	The moduli stack of enriched structures and a logarithmic compactification	29
3.1	Introduction	30
3.2	Conventions and notation	33
3.3	A tropical story	36
3.4	The stack of r -rich log curves and the stack of r -enriched curves	40
3.5	Comparison to work by Mainò	45
3.6	A compactification	48
3.7	Comparison to work by Holmes-Biesel	59
3.8	Minimal objects of $\mathbf{RLC}_r$	61
4	Logarithmic cohomological field theories	65
4.1	Introduction	65
4.2	Conventions	69
4.3	Log pointed curves	74
4.4	Piecewise polynomial functions and the DR cycle	82
4.5	Gluing log pointed curves	86
4.6	Log CohFTs	90
4.7	The log double ramification cycle as a partial log CohFT	94
4.8	Comparison with log Chow rings of Barrott	102

4.9	Tropical gluing	106
5	A geometric linear Chabauty comparison theorem	111
5.1	Introduction	111
5.2	Acknowledgments	113
5.3	Background	113
5.4	Explicit Geometric linear Chabauty mod p	123
5.5	Comparison	127
6	Geometric quadratic Chabauty and p-adic heights	135
6.1	Introduction	135
6.2	Overview and Set-up	138
6.3	Understanding the biextension and T	142
6.4	The line bundle	152
6.5	Embedding the curve	158
6.6	Integer points of the torsor	161
6.7	The geometric quadratic Chabauty algorithm	165
6.8	The comparison theorem	167
6.9	Example	174
6.10	Acknowledgements	183
7	Local heights on hyperelliptic curves and quadratic Chabauty	185
7.1	Introduction	186
7.2	Semistable models, coverings, and vertex sets	190
7.3	The local heights formula	209
7.4	The Coleman–Iovita isomorphism	220
7.5	Explicit Coleman–Iovita	235
7.6	Computations	250
7.7	Examples	256
	Summary	287
	Counting curves	288
	Rational points	293
	Samenvatting	299
	Krommen tellen	300
	Rationale punten	306
	Acknowledgements	313
	Curriculum Vitae	315
