Acknowledgements

First and foremost, I extend my deepest gratitude to my doctoral supervisors, Prof. Dr. Frank den Hollander, Prof. Dr. Diego Garlaschelli and Prof. Dr. Michel Mandjes, for their guidance, invaluable advice, and continuous support throughout the course of this journey.

I would like to start thanking Frank for the role model he has been for me, for the nice moments we spent together and the many passions we shared outside work. His expertise and insight have been crucial in shaping both the direction and the outcome of my work. His patience, encouragement, and rigorous standards have not only helped me to elevate my work to its highest potential but have also significantly contributed to my personal and professional growth. Without you and your patience this journey would have not been the same.

My second academical father has been Diego, to whom I will always be grateful for guiding me in this journey between physics and mathematics. Despite the distance, your guidance has always been insightful and an inspiration for what physics intuition should be and what it can bring to mathematics. Besides your academical mentorship I also enjoyed your human companionship. The good moments we spent in Lucca, Leiden and Lipari with the research group are unforgettable and a good reminder of how fun scientific research can and should be.

Next, I would like to express my sincere appreciation to Michel as well. The multiple journeys I made to Amsterdam to update you on the progress of our research have always been a moment of inspiration and learning. Your vision on the problems we faced has always been clear and stimulated me to find always the easiest and most natural answer to the questions we have been asking.

Even if not formerly my supervisor, I wish to mention Dr. Rajat S. Hazra as one of my most precious mentors in this journey, his contribution to my research has been invaluable and his constant and precious support played a crucial role in the successful outcome of these four years. I am deeply grateful to him, for the time he dedicated me, and for the instructive discussion we had at the blackboard. The moment he arrived in Leiden was a great benefit for me and the whole probability group. Working with you has been a beautiful experience and I hope it will continue in the future. Between the senior staff, I wish to thank Prof. Dr. Luca Avena as well, for the useful discussions and many cheerful moments we spent together (rigorously in Italian). I am also immensely thankful to my colleagues. I would like to mention Alessio, Daoyi, Federico, Francesca, Nandan and Oliver, with whom I spent most of my time at the institute. Thank you for the useful discussions, the laughs together and the support throughout these four years. You helped making this adventure a beautiful experience, professionally and humanly.

To my dear parents, Sabrina and Antonello, and to Andrea no words can express my gratitude for your unconditional love, endless patience, and unwavering support.

Your sacrifices, belief in my abilities, and constant encouragement have been the cornerstone of my achievements. Your example has instilled in me the values of hard work, perseverance, and the importance of pursuing one's passions with integrity and dedication. To my dear grandparents too, that unfortunately are no more here and cannot see what I achieved thanks to their sacrifices and love.

I must also express my heartfelt thanks to my friends, both within and outside the academic community, for their understanding, support, and encouragement throughout this challenging yet rewarding journey. Your presence, encouragement, and occasional distractions were necessary reprieves that helped maintain my sanity and kept me grounded. In particular I want to mention the friends that this Dutch experience brought in my life, and with whom I shared as well the difficult times of Covid epidemic: Alessandro, Davide, Francesco, Giovanni, Gianluca, Matteo, Niccolò, Nicolò, Valerio, Vladimir. Finally, I would like to acknowledge NETWORKS for their financial support and Leiden University who contributed directly or indirectly to the completion of this thesis. This journey has been a transformative experience, and I am grateful to have been surrounded by such a supportive and inspiring group of people. Thank you all.

Curriculum Vitae

Pierfrancesco Dionigi was born on the 7th of April 1994 in Pesaro, Italy. He grew up in Cattolica and obtained his diploma in Classical Studies from Liceo Giulio Cesare in Rimini in 2013, achieving full marks and honors.

Following high school, he pursued a Bachelor of Science in Physics in Bologna, which he completed with honors in 2016. His thesis on quantum field theories was supervised by Prof. Dr. Alexandr Kamenchtchik. In 2019 he earned his Master of Science in Theoretical Physics with honors, focusing on the spectra of random graphs under the supervision of Prof. Dr. Armando Bazzani.

In October 2019 Pierfrancesco relocated to Leiden, The Netherlands, to commence his Ph.D. in Probability under the joint supervision of Prof. Dr. Frank den Hollander (Leiden University), Prof. Dr. Diego Garlaschelli (Leiden University & IMT Lucca), and Prof. Dr. Michel Mandjes (Leiden University). This position was supported by NETWORKS, a research consortium funded by the Dutch Research Council (NWO) dedicated to studying complex networks and their practical applications. Over the four-year tenure, he focused on random graph models, maximal entropy networks, and spectral graph theory. His primary objective was to establish a connection between Random Matrix Theory results and Statistical Physics via a concept known as the Breaking of Ensemble Equivalence. This research resulted in three papers, two of which have been published and one of which is in preprint status.

During his Ph.D., Pierfrancesco taught two courses in mathematics for humanities and served as a Teaching Assistant in several courses. Additionally, he supervised two pairs of high school students as part of the pre-university college project and assisted in supervising a bachelor student. Apart from his teaching responsibilities, he actively participated in numerous conferences and summer schools, presenting his research through talks and posters. Notable mentions include his attendance at the PIMS-CRM 2022 summer school, Saint-Flour 2022 summer school, and his invitation as a speaker at the YEP 2023 conference.

In January 2024, Pierfrancesco joined the Alfréd Rényi Mathematical Institute in Budapest as part of the ERC Synergy grant DYNASNET led by Prof. Dr. László Lovász. Here, he will focus on Large Deviations, Stochastic Processes on Graphs, and Graph Limits.
