Indo-Slavic lexical isoglosses and the  
prehistoric dispersal of Indo-Iranian

Axel I. Palmér

As part of the Indo-European language family, the Indo-Iranian branch traces its origins back to the Indo-European homeland on the Pontic-Caspian steppe 5000 years ago. But how did it spread from there to Asia? The aim of this thesis is to uncover the early prehistory of Indo-Iranian by investigating its relationship to the Balto-Slavic languages of Eastern Europe, which have been hypothesized to form a subgroup with Indo-Iranian: *Indo-Slavic*. By comparing the linguistic data with evidence from archaeology and genetics, this thesis traces the migration path of prehistoric Indo-Iranian speakers from the Pontic-Caspian steppe, via the rivers and forests of Eastern Europe, across the Ural Mountains, and southwards to the steppes of Central Asia.
