Nanoparticle-based combination drug delivery systems for effective cancer treatment

**Yuanyuan He
2024**

The research described in this thesis was performed at the Department of Radiology, Leiden University Medical Center, the Netherlands.

The research described in this thesis was financially supported by the project grant H2020-MSCA-RISE grant number 777682 - CANCER and 872860 - PRISAR2.

ISBN: 978-94-6506-107-8

Lay-out: Yuanyuan He

Cover design: Zhihang Dong

Thesis printing: Ridderprint

Nanoparticle-based combination drug delivery systems for effective cancer treatment

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 25 juni 2024
klokke 16:15 uur

door

Yuanyuan He
geboren te Henan, China
in 1990

Promotor:

Prof. dr. M. A. van Buchem

Co-promotor:

Dr. C. Eich

Leden promotiecommissie

Prof.dr. P ten Dijke

Prof.dr. JJC Neefjes

Prof.dr. T. van Gelder

Dr. A el Ghalbzouri

Dr. K. Djanashvili

(Delft University of Technology, Nederland)

Contents

Chapter 1	General introduction	1
Chapter 2	EGF-modified PLGA-lanthanide nanoplatform for combined NIR-II cancer imaging and targeted drug delivery	21
Chapter 3	Functionalized nanoparticles targeting tumor-Associated macrophages as cancer therapy	53
Chapter 4	Multifunctional role of lipids in modulating the tumorigenic properties of 4T1 breast cancer cells	129
Chapter 5	Effective breast cancer therapy based on palmitic acid-loaded PLGA nanoparticles	169
Chapter 6	Application of doxorubicin-loaded PLGA nanoparticles targeting both tumor cells and cancer-associated fibroblasts on human skin equivalents mimicking melanoma and cutaneous squamous cell carcinoma	223
Chapter 7	General discussion	265
Chapter 8	Summary	279
Appendix	List of abbreviations List of publications Curriculum vitae Acknowledgments	289
