From Noise to Insight
The Functional Role of of BOLD Signal Variability
and Aperiodic Neural Activity in Metacontrol

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 4 Juli 2024
klokke 15:00 uur

door

Chenyan Zhang
geboren te Linzhou in 1991

Promotor:

Prof.dr. B. Hommel

Co-promotor:

Dr. A. Ghosh

Promotiecommissie:

Prof.dr. H.E. Hulst ((Wetenschappelijk Directeur Instituut psychologie / voorzitter)

Prof.dr. S. T. Nieuwenhuis

Prof.dr. B.U. Forstmann (Universiteit van Amsterdam)

Prof.dr. C. Beste (Technische Universität Dresden)

Dr. R.E. de Kleijn

The research described in this thesis was supported by China Scholarship Council.

Table of Contents

Chapter 1 General Introduction	1
Cognitive control and metacontrol	2
Neural “noise”	4
Temporal variability of fMRI signals	5
Aperiodic neural activity	6
Knowledge gap and research questions	8
Overview of this thesis	9
Chapter 2 Resting-state BOLD signal variability is associated with individual differences in metacontrol.....	11
Abstract.....	12
Introduction.....	13
Materials and Methods.....	17
Results.....	23
Discussion.....	31
Supplementary Information	36
Chapter 3 Aperiodic neural activity reflects metacontrol	47
Abstract.....	48
Introduction.....	49
Materials and methods	53
Results.....	59
Discussion.....	66
Chapter 4 How to think out of the box: Aperiodic neural activity predicts divergent thinking	71

Abstract	72
Introduction.....	73
Materials and Methods.....	75
Results.....	81
Conclusions.....	84
Chapter 5 Summary and Discussion.....	87
Theoretical implications	89
Practical implications.....	93
Limitations and future directions	94
References	95
Nederlandse Samenvatting	113
Curriculum Vitae.....	115
List of Publications.....	116
Acknowledgements	119
