Schistosoma mansoni Extracellular Vesicles and their Impact on the Immune System

Glycosylated Messengers in Host- Pathogen Communication

The background of the poster is a detailed, abstract illustration of biological cells and extracellular vesicles. It features large, red, spiky structures resembling dandelion seeds or viruses, interspersed with smaller, blue and red spherical vesicles. Some vesicles are shown budding from larger cells, and others are suspended in the space. The overall composition is organic and dynamic, suggesting a complex biological environment.
