Curriculum Vitae

Shima Javanmardi was born in 1989 in Shiraz, Iran. She earned her Bachelor's degree in Software Engineering in 2012 and her Master's degree in the same field in 2017 at Yazd University in Iran. In October 2019, she visited the Leiden Institute of Advanced Computer Science (LIACS) at Leiden University in the Netherlands for a research period to work with Prof. Verbeek. In the summer of 2020, she began her PhD under the supervision of Prof. Dr. Fons Verbeek and Prof. Dr. Marcello Bonsangue within the Bio-Imaging group. Throughout her PhD, she engaged in extensive research in machine learning, deep learning, computer vision, and generative AI, contributing to international journals and conferences. Over the past few years, she has served as a reviewer for scientific journals like IEEE Access and Scientific Reports. Currently, she is working as a research and teaching staff member at Leiden University.

Acknowledgements

Writing this acknowledgment marks the most thrilling part of composing my thesis, a culmination of a challenging yet inspiring academic journey that began on October 3, 2019. The excitement of starting was quickly compounded by the global pandemic, making the journey laborious but rewarding. Balancing full-time work while assisting various courses alongside my PhD research proved immensely challenging but equally valuable. I am glad to have reached this milestone and am delighted to share this special moment. I want to extend my heartfelt thanks to my supervisors, colleagues, friends, and family. Their support throughout this journey has been invaluable.

I would first of all like to express my sincere appreciation to my first promoter, Professor Fons Verbeek, for his unwavering support throughout my PhD research. His patience, motivation, and enthusiasm have been pivotal. I vividly recall the moments when I was overwhelmed by obstacles; he would remind me of how a child learns to walk, by falling and rising again and assure me that my time would come. Though I still face many challenges, his support has been a beacon of warmth.

I also owe immense gratitude to my second promoter, Professor Marcello Bonsangue, for his encouragement and invaluable feedback on my paper submissions and my thesis. His smile and positive energy never failed to inspire me.

Thanks to my colleagues at LIACS, who have become like an extended family to me. Abdel was always there when I needed support; Juriaan assisted with any technical issues; Marloes welcomed me into her office, offering guidance and support; and Alexandra shared countless laughs and brainstorming sessions, becoming a sister I could always rely on. And it wasn't just them, my other colleagues were incredibly supportive as well.

To all my friends: Samira and Roozbeh, who agreed to be my paranymphs which means a lot to me; Mahnaz, Tanaz, Fatemeh, Abolfazl, Amin, Faezeh, Jafar and Sumiran. I cherish our joyful moments, especially during our lunch breaks. I am equally thankful to our Image Analysis group members: Lu, Katy, Erwin, Rohola, Anna, Leon, Erick, Yi, Chen, Jingmin, Zhan, Feibo and Mariam. I would also like to extend my gratitude to Prof. A. Martynenko and Dr. S.-H. M. Ashtiani from the Dalhousie University, Department of Engineering, Faculty of Agriculture, for their contributions to two of our projects.

My deepest appreciation goes to my family, parents and sisters, Mitra, Zahra, Fatemeh, and Sareh. Your unconditional love and support have been my foundation and strength throughout my life. This achievement would not have been possible without your support.

Finally, heartfelt thanks to my soulmate, Mehrdad. Meeting you in the Netherlands and planning a future together has been the most beautiful aspect of this journey. Your endless support, kindness, and belief in me, even when I doubted myself, have made all the difference. Together, we have weathered many ups and downs, and I look forward to facing whatever lies ahead with you by my side.
