DANKWOORD

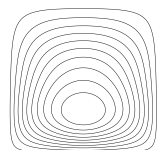

In September 2018, I began my journey at the LUMC as a master's student. Since then, much has transpired, and I look back on this chapter of my life with pride and joy. My time at the Gorter MRI center has been nothing short of extraordinary, thanks to the remarkable and diverse group of individuals I had the pleasure of working with. I would like to express my gratitude to all of my colleagues for their positive energy and ambitious spirits.

The group I collaborated with most closely was the low-field group. Tom, I have worked with you the longest, and it has been a true pleasure. I am glad that you will continue to work on the project, as your critical perspective will undoubtedly help drive it forward. Javad, I will miss our jokes and our discussions regarding hardware-related issues. Chloé and Bea, I am delighted that you joined the team. I have shared countless laughs with both of you, and I firmly believe that your innovations and improvements in sequencing and applications will showcase the immense potential of the system. Wouter, should this thesis ever reach Drenthe by carriage or pigeon, thank you for everything you have taught me. Your lessons in life and craftsmanship have been invaluable.

Then there is my office, the (wo)man-cave. Emiel, thank you for your positivity, Brabantse gezelligheid, and the snacks that helped when my sugar levels dipped. You have shown me that Brabant has its merits after all. Daniëlle, I appreciate your early morning company, the running tips, and the homemade cat videos. Michael, your coffee is truly exceptional, and I hope you one day start your own coffee business. Leon, I am grateful for your return to the Netherlands, as the past few months with you as my office mate have been wonderful. Helena, you are undoubtedly the queen of kebab, and I appreciate you sharing a few with me. To all of you: please continue to care for the mice residing in my drawers (Leonie & Donnie), as they thrive on Calvé peanut butter and dried coffee grounds. Lastly, a special thanks to Fieke, Jasmin, Kevin, Lena, Lisa, Yiming, Manon, and Martijn you all made the coffee breaks and conferences unforgettable. I hope we remain in touch.

Naturally, I must express my gratitude to my supervisors. Andrew, thank you for facilitating my request for the PhD position four years ago. I recall your assurance that if I were to return, I would never be bored, and you were certainly right. Rob, our relationship extends far beyond the professional realm. I already miss our weekly meetings, which often began with informal conversations before delving into the matters at hand. I am confident we will stay connected.

Additionally, I would like to thank my friends and former housemates. You have always provided the perfect distraction, and I know I can always count on you. It is remarkable

that we still see each other so often, despite living farther apart and leading our own lives. Wessel, thank you for the countless (kite-surfing) adventures, life is never dull with you. Dirk, thank you for all your assistance with the formatting of this work and for the fun we had during the process.

Finally, I would like to express my gratitude to my family. Mom and Dad, thank you for supporting my decision to pursue this path and for always being there for me. Tim, you are a wonderful brother, and I admire how you navigate your own path by doing things your way. Moreover, I want to extend my thanks to the Happeetjes, there is always warmth and something delicious waiting on the Kanaalweg. You truly understand that love comes through the stomach. Last but certainly not least, I would like to thank Kate. Without you, I could not have completed this journey in the way that I did. You are the person who gives me peace of mind.
