Essays on the Economics of Household Finance and Social Insurance

Essays on the Economics of Household Finance and Social Insurance

PROEFSCHRIFT

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op 18 december 2024
klokke 10.00 uur

door

Pim Leonard Koopmans

geboren te Zoetermeer

in 1995

Promotores: prof.dr. M.G. Knoef (Tilburg University)
 prof.dr. K.P. Goudswaard

Co-promotor: dr. M. van Lent

Promotiecommissie: prof.dr. E.C. Brügger (Universiteit Maastricht en
 Universiteit van Tilburg)
 prof.dr. E.L.W. Jongen
 prof.dr. P.W.C. Koning (Vrije Universiteit Amsterdam)
 dr. P.W. van der Zwan

The research in this book is sponsored by Instituut GAK.

Preface

I thank Leiden University for providing me the opportunity to work for the Economics department. Performing research at and interacting with the department allowed me to develop as a researcher and as an individual.

My gratitude goes out to Marike Knoef, Max van Lent, and Kees Goudswaard for their supervision. I also thank Jim Been, Marike Knoef, and Max van Lent for our work together on the papers in the dissertation.

I additionally thank my colleagues in the economics department for the past years and the interesting discussions we held. I enjoyed writing my dissertation and happily look back on the past years I spent at the Leiden University's Economics department.

Additionally, I wish to express my gratitude to the members of the Ph.D. committee Lisa Brügggen, Wilco van Dijk, Egbert Jongen, and Pierre Koning for being part of the Ph.D. commission.

My gratitude also goes out to Stefan van Woelderren and Dominic Keyzer for setting up the data for Chapter 3 and the assistance they provided along the way. This chapter would not be possible without them.

I thank Marloes Lammers, Carla van Deursen, and Frank Schreuder for preparing the data used in Chapter 5. My gratitude additionally goes out to Marloes Lammers, Margaretha Buurman and Miranda de Vries for useful comments, discussions, and suggestions.

My gratitude goes out to Henri de Groot, Zichen Deng, Sándor Sóvágó, and Pierre Koning for their support prior to my Ph.D. trajectory, as well as more generally helping me enter the academic world of Economics. I also thank Heike Vethaak for informing me of the Ph.D. vacancy at Leiden University.

Finally, I thank my family and friends. In particular, I extend my gratitude to my parents, Carl and Péronne, who have helped me tremendously throughout my life. Without their support, I cannot emphasize enough that I would not be where I am now.

My Ph.D. at Leiden University was an excellent learning experience. I look forward to hearing about future developments at the department, and to keep in touch irrespective of where future research takes me.

Table of Contents

1	INTRODUCTION	15
1.1	Retirement savings of self-employed workers	17
1.2	The effect of retirement on household finances	18
1.3	Child penalties and time allocation	20
1.4	Non-public disability insurance	21
2	THE DEMAND FOR RETIREMENT PRODUCTS: THE ROLE OF WITHDRAWAL FLEXIBILITY AND ADMINISTRATIVE BURDEN	23
2.1	Introduction	25
2.2	Institutional setting	28
2.3	Data	30
2.4	Methodology	35
2.5	Vignette design	37
2.5.1	Attribute levels	38
2.5.2	Administrative Burden	38
2.5.3	Flexibility	38
2.5.4	Price	39
2.5.5	Design Characteristics	40
2.6	Results	41
2.6.1	Main results	41
2.6.2	Heterogeneity	45
2.7	Conclusion	50
A2	Appendices	52
A2.1	Example of a vignette	52
A2.2	Rounding and zero probabilities	53
A2.3	Risk preference, present-bias and bequest motive questions	53
A2.4	Heterogeneity among self-employed workers	56
A2.5	LAD estimates with varying uniform noise applied	57
3	THE IMPACT OF RETIREMENT ON HOUSEHOLD FINANCES: CAUSAL EVIDENCE FROM TRANSACTION DATA	59
3.1	Introduction	61
3.2	Institutional setting	63
3.3	Data	65
3.3.1	Variable definitions and descriptive statistics	66
3.3.2	Financial data	71
3.4	Methodology	74
3.4.1	Fixed effects model	74

3.4.2	Regression Discontinuity approach	75
3.4.3	Difference-in-Differences approach	77
3.5	Results	78
3.5.1	OLS and FE results	78
3.5.2	Fuzzy donut RD results	79
3.5.3	Instrumented difference in differences model	81
3.5.4	Heterogeneity	83
3.6	Conclusion	87
A3	Appendices	88
A3.1	Inflow and outflow summary statistics and estimates	88
A3.2	Robustness checks: including the cutoff observations	90
A3.3	Robustness checks fuzzy donut RD model	92
A3.4	Reduced form results	94
A3.5	First stage results	95
A3.6	Full estimation results	96
A3.7	Means of dependent variables by subgroup	101
A3.8	Cash flows and balances for UI/DI recipients	103
4	CHILD PENALTIES AND THE GENDER GAP IN HOME PRODUCTION AND THE LABOR MARKET	105
4.1	Introduction	106
4.2	Institutional setting	108
4.3	Methodology	109
4.4	Data	111
4.5	Results	118
4.5.1	Labor market outcomes	119
4.5.2	Household time use	121
4.6	Conclusion	125
A4	Appendices	127
A4.1	F-tests of pre-childbirth coefficients	127
A4.2	Time use with imputed data	128
A4.3	Additional outcome measures	133
5	DOES OPTING OUT OF PUBLIC DISABILITY INSURANCE LEAD TO MORE OUTFLOW TO WORK? EVIDENCE FROM THE NETHERLANDS	137
5.1	Introduction	138
5.2	Institutional setting	141
5.3	Literature review	144
5.4	Data	147
5.5	Methodology	156
5.6	Results	160
5.6.1	Outflow by outflow reason	160
5.6.2	Outflow to Work by Current or Different Employer	167
5.6.3	Re-assessments to a lower degree of disability	170
5.6.4	Re-assessments	172
5.7	Conclusion	173

A5	Appendices	176
A5.1	OLS and FE estimates of outflow	176
A5.2	Full coefficient list of main estimates	177
A5.3	Selection on inflow risk	182
A5.4	Outflow rates on the basis of firm-switching	184
6	GENERAL DISCUSSION	189
6.1	Early money withdrawal options and reducing administrative burden for retirement	190
6.2	The impact of retirement on household finances	190
6.3	The child penalty in the Netherlands and the role of time use	191
6.4	Outflow from non-public disability insurance	192
6.5	Policy and future research	193
	BIBLIOGRAPHY	196
	NEDERLANDSE SAMENVATTING	215
	Studies over huishoudfinanciën en sociale zekerheid	215
	OVERVIEW OF AUTHOR CONTRIBUTIONS	225
	CV	227

List of Tables

2.1	Demographic characteristics of respondents	31
2.2	Descriptive statistics: preferences for retirement savings	33
2.3	Preferences and expectations of respondents	34
2.4	LAD estimates	43
2.5	WTP estimates measured as a percentage of the post-retirement annuity	45
2.6	WTP estimates measured as a percentage of the post-retirement annuity separated by demographic characteristics	47
2.7	WTP estimates measured as a percentage of the post-retirement annuity separated by income and pension characteristics	48
2.8	WTP estimates measured as a percentage of the post-retirement annuity separated by personal preferences	49
A2.1	Rounding behavior of respondents	53
A2.2	Probabilities of zero in second set of vignettes (before rounding adjustments)	53
A2.3	Heterogeneity in demographic characteristics among self-employed workers	56
A2.4	Heterogeneity in pension characteristics among self-employed workers	56
A2.5	Heterogeneity in demographic characteristics among self-employed workers	57
A2.6	LAD estimates with half the uniform noise applied to rounders	57
A2.7	LAD estimates with double the uniform noise applied to rounders	58
3.1	Retirement ages and birth years of the cohorts included in our analysis	64
3.2	Characteristics of the individuals included in the sample	68
3.3	Descriptive statistics of financial variables	72
3.4	OLS and Fixed Effects (FE) results on the relationship between retirement and several financial outcome measures	79
3.5	Fuzzy donut RD estimates examining the effect of retirement on several financial outcome measures	81
3.6	Instrumented DiD estimates examining the effects of retirement on financial outcome measures	83
3.7	Heterogeneity analyses for the instrumented fuzzy RD estimates	85
3.8	Heterogeneity analyses for the instrumented DiD estimates	86
A3.1	Descriptive statistics of total inflow and total outflow	88
A3.2	OLS and FE estimates of inflow and outflow as a result of retirement	89
A3.3	Instrumented RD estimates of inflow and outflow as a result of retirement	90
A3.4	Instrumented DiD estimates of inflow and outflow as a result of retirement	90

A3.5	OLS and FE estimates of cash flows as a result of retirement including the cutoff observations	91
A3.6	RD estimates of cash flows as a result of retirement including the cutoff observations	92
A3.7	DiD estimates of cash flows as a result of retirement including the cutoff observations	92
A3.8	Donut RD estimates with varying bandwidth sizes between 0.5 and 3 years. Control variables are gender, a cohort 2 dummy, household size, and a set of month dummies	93
A3.9	Donut RD estimates with a second-order polynomial instead of a first-order polynomial	94
A3.10	RD reduced form estimate on the basis of receiving statutory retirement benefits	94
A3.11	DiD reduced form estimate on the basis of receiving statutory retirement benefits	95
A3.12	Full parameter list of the first stage RD and DiD estimates	96
A3.13	Full parameter list of OLS estimates	97
A3.14	Full parameter list of FE estimates	98
A3.15	Full parameter list of RD estimates	100
A3.16	Full parameter list of DiD estimates	101
A3.17	Means of dependent variables by subgroup	102
4.1	Summary statistics by gender	112
4.2	Balancing statistics of labor market outcomes and demographic characteristics in the year prior to childbirth	113
4.3	Baseline effects for women and the corresponding Kleven penalty by outcome measure relative to one year before the birth of one's first child	124
A4.1	P-values of F tests with respect to pre-childbirth coefficients	127
5.1	Individual characteristics of DI recipients separated by insurance status on the first day of DI entitlement	150
5.2	Percentage of spells in the sample that resulted in an approved re-assessment, separated by whether the spell is publicly or non-publicly insured	156
5.3	Piecewise-constant estimates of outflow by outflow reason, not accounting for cumulative incidence	160
5.4	Piecewise-constant estimates of dynamic selection, not accounting for cumulative incidence	161
5.5	Piecewise-constant estimates of outflow by outflow reason, not accounting for cumulative incidence	168
5.6	Piecewise-constant estimates of dynamic selection, not accounting for cumulative incidence	169
5.7	Estimates of number of DI spells successfully Re-assessed in the sample, separated by re-assessment type	172
A5.1	OLS and Fixed effects estimates of outflow within a given timeframe	176
A5.2	Full parameter list of the models estimated in Table 5.3	181
A5.3	Estimates of inflow-based dynamic selection	183

List of Figures

2.1	The distribution of income and assets for self-employed and employees	32
A2.1	Example of a vignette	52
3.1a	Fraction receiving occupational pension by cohort and age	70
3.1b	Average occupational pension income by cohort and age	71
3.1	Descriptives of pension reciprocity	71
3.2	Graphs of outcome measures	73
A3.1	Inflow and outflow before and after the statutory retirement age and receiving occupational pension	89
A3.2	Pension reciprocity and unconditional pension inflow for UI/DI recipients	103
A3.3	Graphs of outcome measures for UI/DI recipients	104
4.1	Means and confidence intervals of hourly and monthly earnings over the event time	114
4.2	Means and confidence intervals of hours worked and commuted over the event time	115
4.3	Means and confidence intervals of time spent on home production and the sum of labor market activity and home production over the event time	116
4.4	Means and confidence intervals of time spent on leisure over the event time	117
4.5	Participation rate coefficients by gender	119
4.6	Monthly earnings coefficients by gender	119
4.7	Weekly hours working and commuting coefficients by gender	120
4.8	Weekly hours spent on children and chores coefficients by gender	121
4.9	Weekly hours spent on working, commuting, children, and chores by gender	122
4.10	Weekly hours spent on leisure by event time and gender. ¹²³	
A4.1	Weekly hours spent working by event time and gender with imputed time use	128
A4.2	Weekly hours spent working and commuting by event time and gender with imputed time use	128
A4.3	Weekly hours spent on children by event time and gender with imputed time use	129
A4.4	Weekly hours spent on chore and children by event time and gender with imputed time use	129
A4.5	Weekly hours spent on total household activity by event time and gender with imputed time use	130
A4.6	Effects of childbirth on hours spent working by event time and gender with imputed time use	130

A4.7	Effects of childbirth on hours spent working and commuting by event time and gender with imputed time use	131
A4.8	Effects of childbirth on hours spent on children by event time and gender with imputed time use	131
A4.9	Effects of childbirth on hours spent on chores and children by event time and gender with imputed time use	132
A4.10	Effects of childbirth on hours spent on total household activity by event time and gender with imputed time use	132
A4.11	Hourly wage estimates by event time and gender	133
A4.12	Log monthly wage estimates by event time and gender	133
A4.13	Level monthly wage estimates by event time and gender.	134
A4.14	Weekly hours worked estimates by event time and gender	134
A4.15	Weekly hours spent on children estimates by event time and gender	135
5.1	Total number of DI spells that started between 2006 and 2021	148
5.2	Number of governmental and non-governmental DI spells that started and ended in every year between 2006 and 2022	149
5.3	Fraction of spells that ended within a given number of years, separated by insurance status on the first day of DI entitlement	152
5.4	Fraction of DI spells that ended within a given number of years	154
5.5	Fraction of DI spells that ended within a given number of years, separated by insurance status	155
5.6	Estimated DI outflow to work within a given number of years, accounting for cumulative incidence of outflow reasons	163
5.7	Estimated DI outflow to recovery without work within a given number of years, accounting for cumulative incidence of outflow reasons	164
5.8	Estimated DI outflow to full DI within a given number of years, accounting for cumulative incidence of outflow reasons	165
5.9	Estimated DI outflow for reasons such as retirement within a given number of years, accounting for cumulative incidence of outflow reasons	166
5.10	Estimated re-assessments to a lower degree of disability during the DI spell, accounting for cumulative incidence of outflow reasons	170
5.11	Estimated spells that do not result in re-assessments to a lower degree of disability during the DI spell, accounting for cumulative incidence of outflow reasons	171
A5.1	Estimated outflow to work separated by whether the firm switched insurance status during the spell, accounting for cumulative incidence of outflow reasons	184
A5.2	Estimated outflow to recovery without work separated by whether the firm switched insurance status during the spell, accounting for cumulative incidence of outflow reasons	185
A5.3	Estimated outflow to full DI separated by whether the firm switched insurance status during the spell, accounting for cumulative incidence of outflow reasons	186
A5.4	Estimated outflow for other reasons such as retirement separated by whether the firm switched insurance status during the spell, accounting for cumulative incidence of outflow reasons	187
