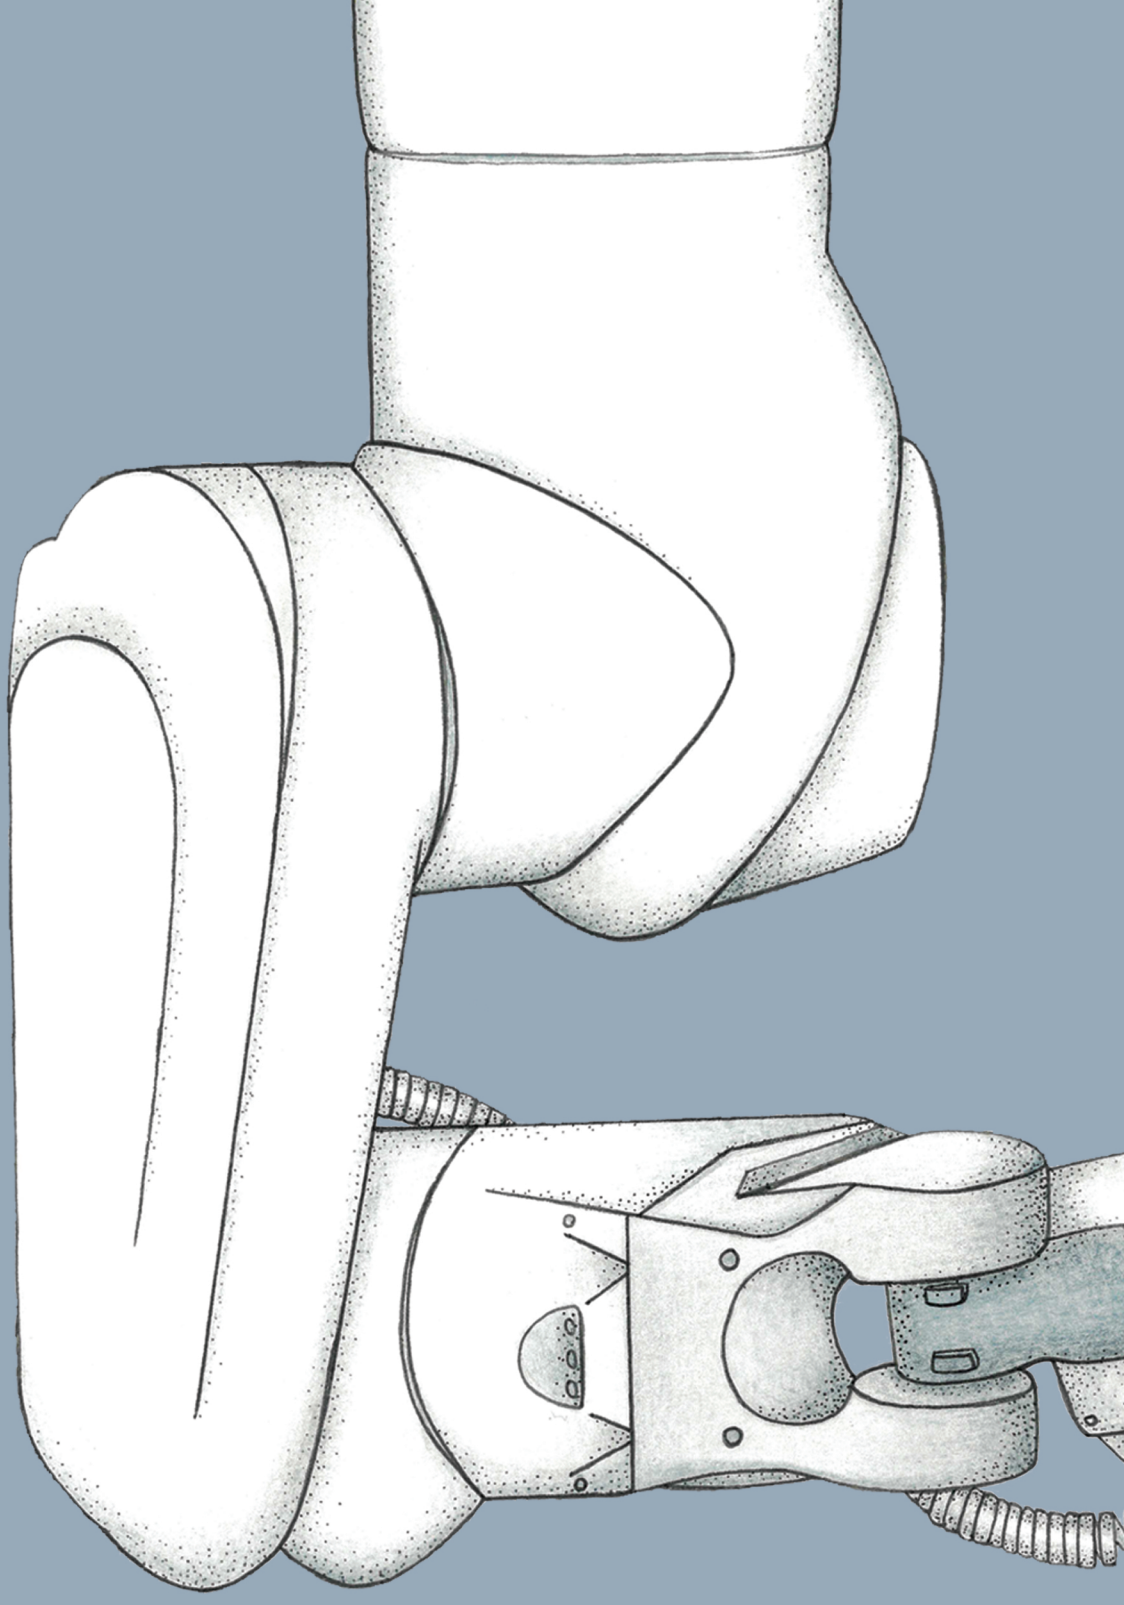
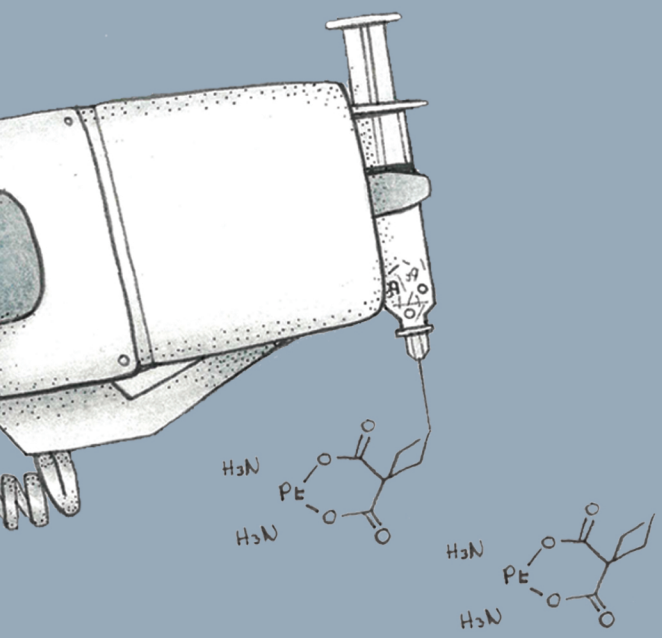
Robotic reconstitution of cytostatic drugs and monoclonal antibodies: transforming aseptic drug compounding in hospital pharmacies

Geersing, T.H.



Section VI

Appendices



CURRICULUM VITAE

Tjerk Harmen Geersing was born in Hengelo, The Netherlands, in 1989. He earned a Bachelor's degree in Pharmacy from the University of Groningen (Rijksuniversiteit Groningen) in 2009, followed by a Master's degree in Pharmacy in 2013. Shortly after, he began his career as a pharmacist at the Laurentius Hospital in Roermond. In 2014, he joined Stichting Health Base, where he conducted research on hypersensitivity reactions following vaccination.

In 2016, Tjerk started working as a pharmacist at OLVG in Amsterdam, where he implemented and conducted research on a robotic compounding system under the supervision of Dr. Mirjam Crul. During his residency training in hospital pharmacy, completed at OLVG and Amsterdam UMC, he continued his research into robotic reconstitution. Additionally, he pursued specializations in infectious diseases and medical leadership and conducted a study on continuous amphotericin B infusion in critically ill patients.

In 2021, Tjerk initiated a collaboration with the Leiden Academic Center for Drug Research (LACDR) in Leiden. That same year he officially began his PhD research at LACDR under the supervision of Dr. Mirjam Crul, Dr. Eric Franssen, the late Prof. Dr. Wim Jiskoot, and later Prof. Dr. Catherijne Knibbe. Concurrently, he started working as a hospital pharmacist at the St. Antonius Hospital in Nieuwegein. His doctoral research focused on evaluating the advantages of robotic reconstitution of cytostatic drugs and monoclonal antibodies compared to manual reconstitution methods.

Tjerk's passion for automation and innovation remained evident at the St. Antonius Hospital, where he integrated the center into his PhD research and successfully implemented a robotic compounding system in 2024.

ACKNOWLEDGMENTS

The completion of this dissertation would have been impossible without the support, guidance, and inspiration of many. First, I would like to thank my supervisor, Prof. Dr. Catherijne Knibbe, for her sharp insights and constant encouragement. I am especially grateful to her for taking over the supervision after the tragic loss of Prof. Dr. Wim Jiskoot. Wim is remembered with respect and gratitude for initiating and guiding this PhD project.

My deepest gratitude goes to my co-supervisors, Dr. Mirjam Crul and Dr. Eric Franssen. Mirjam, your inexhaustible enthusiasm for our work is truly inspiring; thank you for your trust and for shaping this research project. Eric, I am thankful for your encouragement as a mentor to integrate relevant research into my hospital pharmacy training program.

A special word of thanks goes to the BioTherapeutics department of the LACDR for their support with experiments and access to equipment. Reza Nejadnik and Stefan Romeijn, your substantive and technical assistance was invaluable. Dunja, your dedication during your master's research was phenomenal and resulted in a wonderful publication.

I am also grateful to all my fellow pharmacists and researchers for the pleasant collaboration. Demelza, Simone, and Annabel, it was a privilege to explore new insights with you, engage in discussions, and co-author publications. Femke, your excellent bachelor's thesis research made a significant contribution to this dissertation.

I am deeply thankful to my colleagues at St. Antonius Hospital, who created the space for me to complete my research by taking over some of my responsibilities. Anne-Fleur, thank you for the beautiful illustration you created for the cover of this dissertation. I would also like to thank my colleagues at OLVG and Amsterdam UMC for their encouragement, involvement, and collegiality.

To my family and friends, thank you for all the love and support you have given me in recent years. Marije, my dear wife, my sincere gratitude for your unconditional support and love. And to our children, Tessie, Ivo, and Luuk: you are my greatest inspiration. I hope you always remember that with passion and determination, anything is possible.
