Deciphering the Atomic Structure of the Electrified Metal Oxide-Electrolyte Interface

Deciphering the Atomic Structure of the Electrified Metal Oxide-Electrolyte Interface

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 3 april 2025
klokke 11:30 uur

door

Nipon DEKA

geboren te Assam, India
in 1992

Promotor: Prof. dr. M. T. M. Koper

Co-promotor: Dr. R. V. Mom

Promotiecommissie:

Prof. dr. M. Ubbink

Prof. dr. I. M.N. Groot

Prof. dr. S. J. van der Molen

Prof. dr. G. Held

Dr. C. Baeumer

Diamond Light Source and University of Reading
University of Twente

Universiteit
Leiden
The Netherlands

The work presented in this thesis was supported by the Dutch Organisation for Scientific Research (NWO) through an ECCM Tenure Track grant, ECCM.TT.001.

*Information is just bits of data. Knowledge is putting them together.
Wisdom is transcending them.*

Ram Dass

Contents

1	Introduction	1
1.1	Imperative for Sustainable Fuels	1
1.2	Electrocatalysis: A key to sustainable energy.	1
1.3	Metal oxides in Electrocatalysis	3
1.3.1	The metal oxide surface and its catalytic properties.	4
1.3.2	Metal oxide-electrolyte interactions	5
1.4	Interface-sensitive X-ray absorption spectroscopy	7
1.4.1	Principle of X-ray absorption spectroscopy (XAS)	8
1.4.2	Soft XAS for Probing the Buried Electrified Interface.	9
1.4.3	Creating Interface-Sensitivity in Soft XAS	10
1.5	Scope of the thesis	12
2	On the Operando Structure of Ruthenium Oxides during the Oxygen Evolution Reaction in Acidic Media	19
2.1	Introduction	20
2.2	Experimental methods	21
2.2.1	Operando X-ray Spectroscopy	21
2.2.2	Sample Preparation for XAS	22
2.2.3	Operando Electron Microscopy.	23
2.2.4	Catalytic Testing with RDE.	23
2.2.5	Computational Methods	23
2.3	Results and Discussion	24
2.3.1	Oxygen K-Edge XAS	26
2.3.2	Ruthenium M ₃ -Edge XAS	31
2.4	Conclusions	33
3	Ti dopants as a morphology-stabilizing agent in mesoporous ruthenium oxide electrodes	41
3.1	Introduction	42
3.2	Experimental methods	43
3.2.1	Oxide film synthesis	43
3.2.2	Characterization	43
3.3	Results and Discussion	44
3.4	Conclusions	50
4	Electrode-electrolyte interactions on oxide surfaces: the crucial role of surface redox chemistry	55
4.1	Introduction	56
4.2	Experimental methods	56
4.2.1	Operando X-ray Spectroscopy	56

4.2.2	Sample Preparation for XAS	57
4.2.3	Sample Preparation for EQCM	58
4.2.4	Catalytic testing using RDE	58
4.2.5	Computational Methods	59
4.3	Results and Discussion	60
4.3.1	Sodium K-Edge XAS	62
4.3.2	Oxygen K-Edge XAS	65
4.3.3	Chlorine K-Edge XAS	68
4.4	Conclusions	69
5	Reversible and Irreversible Cation Intercalation in NiFeO_x Catalysts in Alkaline Media	75
5.1	Introduction	76
5.2	Experimental methods	77
5.2.1	Operando X-ray Spectroscopy	77
5.2.2	Sample Preparation for XAS	78
5.3	Results and Discussion	79
5.3.1	Nickel Redox Behavior Probed via Cyclic Voltammetry and Nickel L-Edge XAS	79
5.3.2	Sodium K-Edge XAS	80
5.3.3	Oxygen K-Edge XAS	82
5.4	Conclusions	83
A	Supplementary Information to Chapter 2	87
A.1	Operando SiN _x cell assembly.	87
A.2	Synthesis of polycrystalline ruthenium oxide.	88
A.3	O K-edge XAS resonances	89
A.4	DFT calculation (all surfaces).	90
A.5	Crystallinity of ruthenium oxide based on O K-edge XAS	90
A.6	Shift of O K-edge XAS resonances and effect of normalization	92
A.7	Reversibility of deprotonation reaction (from O K-edge XAS).	92
A.8	Ex-situ Ru M ₃ -edge XAS	92
A.9	Ruthenium L _{3,2} -edge XAS	93
B	Supplementary Information to Chapter 3	99
B.1	Cross section of the oxide films.	99
B.2	Large scale morphology	99
B.3	Chloride ions in the lattice	100
B.4	Electronic structure of the as-prepared films	101
B.5	O K-edge XAS	101
C	Supplementary Information to Chapter 4	105
C.1	Mesoporous iridium oxide synthesized via spark ablation	105
C.2	Mesoporous iridium oxide synthesized via EISA	107
C.3	Calculation of Na ⁺ ion concentration in porous volume and Na ⁺ surface coverage	108
C.3.1	Contribution of bulk electrolyte to the Na K-edge signals	108

C.3.2	Calculation of Na^+ ion concentration in the pores for acidic media .	111
C.3.3	Calculation of Na^+ ion concentration in the pores for alkaline media	111
C.3.4	Calculation of Na^+ surface coverage	111
C.4	Extracting Na K-edge spectrum of the double layer.	112
C.5	Electrochemical characterization	113
C.6	Nature of ion adsorption	115
D	Supplementary Information to Chapter 5	117
D.1	Na K-edge spectra in water and air	117
D.2	Analysis of Na signal at 1081 eV	118
D.3	Determination of film thickness	118
D.4	Ex-situ Ni L-edge and O K-edge spectra of the as synthesized sample . . .	119
	Summary	121
	Samenvatting	125
	Acknowledgments	127
	Curriculum Vitæ	129
	List of Publications	131
