Acknowledgements

This thesis represents a journey of growth and discovery, and I am deeply grateful to the many people and institutions who supported me along the way. First and foremost, I would like to express my heartfelt gratitude to my supervisor, Joachim Koops, for his astute advice and unwavering guidance and support, not only during this research project but throughout my academic career. There are few people who gave me confidence in myself and my ideas as much as Joachim did, and I wish for every scholar to experience this kind of mentorship. I sincerely thank my co-supervisor, Corneliu Bjola, for his enthusiasm and insightful feedback on the dissertation. The intellectual discussions we had and the expertise he brought to the table have, without a doubt, contributed to the success of this project.

I am grateful to the faculty and staff of Leiden University, particularly the Institute of Security and Global Affairs, for providing a flexible environment and the resources necessary to undertake this research. I extend my thanks to Antoaneta Dimitrova, Lydie Cabane, Jan Melissen, Silva D'Amato, Parto Mirzaei, Matthew Hoye, and Tom Buitelaar for their support, advice, and constructive critiques during key milestones of this degree. I am particularly grateful for Josh Wiebe, Eva Froneberg, and Astrid de Vries for their empathy and assistance during the first few months of my doctoral studies, which unluckily started with broken bones in the height of the COVID-19 pandemic. Thank you for being there in those difficult times.

Special thanks are owed to the participants of my interviews, whose time, trust, and openness have enormously contributed to the richness of this research project. This thesis could neither have been possible without the insights of the scholars who supported me during my studies, including Heidi Maurer, Helene Sjørusen, Ben O'Loughlin, and Rhonda Zaharna. Thank you for your generous advice and feedback. I am also deeply indebted to the RENPET Network, whose support enabled my stay at the University of Oslo. Lastly, it would be impossible not to thank the Europaeum Scholars Programme, especially Tracey Sowerby, Andrew Graham, and Hartmut Mayer, for making my doctoral studies the unforgettable experience that it was. The Europaeum gave me unparalleled belief in myself and my capacities, not only as an academic but also as a changemaker. This is also largely due to the incredibly kind, intelligent, and supportive scholars I was lucky enough to collaborate with. Thank you all for being the extraordinary people you are and for inspiring me to be and do better every day.

On a personal note, I would like to thank my friends and family for their enduring support and encouragement. To my partner, Agustín Helguero, thank you for your patience, understanding, and unrivalled faith in my abilities during the most challenging moments. To my friends, Eva Beaudichau, Elias Callaert, Maureen Bossuyt, Raïssa Brunhara, Ilaria Poledri, and Michele D'Urbino, thank you for being the source of joy and laughter that made this PhD journey so much more bearable and rewarding. I simply could not have made it without you.

This thesis is dedicated to all those who contributed to its realisation, directly or indirectly. Thank you for being part of this journey.
