The neurological and behavioral consequences of dystrophin deficiency in Duchenne muscular dystrophy

Insights from mouse models

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl
volgens besluit van het college voor promoties
te verdedigen op 3 september 2025
klokke 14:30

door

Minou Verhaeg

geboren te Horst
in 1994

Promotors:

Prof. Dr. A.M. Aartsma-Rus

Dr. H.E. Kan

Co-promotor:

Dr. M. van Putten

Promotiecommissie:

Prof. Dr. O.C. Meijer

Prof. Dr. B. Roozendaal, RadboudUMC

Prof. Dr. A.M.J.M van den Maagdenberg

Dr. C. Vaillend, Université Paris-Saclay

Table of contents

Chapter 1	Introduction	7
Chapter 2	Central nervous system involvement in Duchenne muscular dystrophy: a review of behavior and brain pathology in patients and mouse models	15
Chapter 3	Learning, memory and blood-brain barrier pathology in Duchenne muscular dystrophy mice lacking Dp427, or Dp427 and Dp140 <small>Genes, Brain and Behavior, 2024. 23(3): p. e12895.</small>	37
Chapter 4	Behavioral characterization of the mdx5cv, mdx52 and DMD-null mouse models of Duchenne muscular dystrophy <small>Disease Models & Mechanisms, 2025: p. dmm. 052047.</small>	65
Chapter 5	Investigating the effects of prednisolone on behavior in mouse models of Duchenne muscular dystrophy	115
Chapter 6	Magnetic resonance imaging of the brain of Duchenne muscular dystrophy mouse models lacking one, multiple or all dystrophin isoforms	143
Chapter 7	Discussion	163
	References	173
Appendix	English summary Nederlandse samenvatting Curriculum vitae List of publications Acknowledgements	209
