Cover artwork	Illustrations generated with Midjourney
Front cover keywords	CT scan-inspired transverse cross-section of a human brain with a tumor with intricate detailing. The brain should be displayed from the top-down and not a side view. The brain structure is designed using the ornate patterns incorporating traditional Japanese motifs (including Seigaiha, Asanoha, sayagata) golden kintsugi lines. Include Dutch and Portuguese tile patterns. High contrast, intricate textures, and a refined minimalist composition.
Back cover keywords	A refined and intricate background for a chapter page, featuring a deep midnight blue base. Seamlessly integrate with traditional Japanese motifs such as Seigaiha (wave patterns), Asanoha (hemp leaf), and Sayagata (linked geometric designs). The composition should be highly detailed yet well-balanced, creating a sophisticated interplay of textures and patterns. Minimalist aesthetic with an elegant and timeless feel.

Contents

Chapter 1	9	Introduction
Chapter 2	15	Chemical Exchange Saturation Transfer for Preoperative Glioma Characterization
Chapter 3	21	The use of variable delay multipulse chemical exchange saturation transfer for separately assessing different CEST pools in the human brain at 7T
Chapter 4	45	Investigation of metabolite correlates of CEST in the human brain at 7T
Chapter 5	71	Insights into CEST contrast at 2 ppm in enhancing and non-enhancing lesions from glioma patients scanned at 7T
Chapter 6	91	Extension of T_2 hyperintense areas in patients with a glioma: a comparison between high-quality 7T MRI and clinical scans
Chapter 7	111	MRI phenotypes of glioblastomas early after treatment are suggestive of overall patient survival
Chapter 8	139	Discussion
Chapter 9	148	Summary in English
	150	Summary in Dutch
	152	Summary in Portuguese
Chapter 10	155	References
Chapter 11	170	List of publications
	171	First author presentations at international conferences
	173	Acknowledgments
	175	Curriculum Vitae
