The lexico-semantic
representation of words in the
mental lexicon

De lexico-semanticische
representatie van woorden in het
mentale lexicon

(met een samenvatting in het Nederlands)

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. Hester Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 25 September 2025
klokke 10.00 uur

door

Yufang Wang

geboren te Gansu, China in 1994

Promotor: Prof. dr. N.O. Schiller

Co-promotor: Dr. J. Witteman

Promotiecommissie:

Prof. dr. Y. Chen

Dr. C.L. van der Burght

Prof. dr. A.G. Lewis

City University Hong
Kong

Prof. dr. G. de Zubicaray

Queensland University
of Technology

This dissertation is dedicated to my parents
and to my grandma.

Articles in this thesis	xiii
1 General Introduction	1
1.1 Levelt's model of word production	1
1.2 Limitations of Levelt's model	3
1.3 The experimental framework in this thesis	5
1.4 The current thesis	6
2 The role of animacy in language production: evidence from bare noun naming	9
2.1 Introduction	11
2.1.1 Study of language production: electrophysiology	14
2.1.2 The current study	15
2.2 Methods	15
2.2.1 Participants	15
2.2.2 Materials	16
2.2.3 Experimental design and procedure	16
2.2.4 Audio and electroencephalogram (EEG) recordings	18
2.2.5 Data analysis	18
2.3 Results	21

2.3.1	Behavioural data analysis results	21
2.3.2	EEG data analysis results	24
2.4	Discussion	31
2.4.1	Animacy interference effect	32
2.4.2	Dominant classifier effect and its interaction with animacy	33
2.5	Conclusion	35
2.6	Declaration of conflicting interests	35
2.7	Funding	36
	Appendix 2	37
3	The role of semantic features in word production	41
3.1	Introduction	43
3.1.1	The role of semantic features in word produc- tion	45
3.1.2	The current study	46
3.2	Methods	48
3.2.1	Participants	48
3.2.2	Materials	48
3.2.3	Experimental design and procedure	50
3.2.4	Naming responses and electroencephalogra- phy (EEG) recordings	50
3.2.5	Data analysis	51
3.3	Results	55
3.3.1	Behavioral data	55
3.3.2	EEG data	59
3.4	Discussion	66
3.4.1	Role of the semantic feature ‘shape’	67
3.4.2	Difference between the main effects of SC and SH	69
3.4.3	Interaction between SC and SH effects	69
3.5	Conclusion	70
3.6	Acknowledgements	70
	Appendix 3	71

4	Activation of classifiers in word production: insights from lexico-syntactic probability distributions	89
4.1	Introduction	91
4.1.1	The current study	96
4.2	Methods	97
4.2.1	Participants	97
4.2.2	Materials	98
4.2.3	Experimental procedure	101
4.2.4	Audio and electroencephalography recordings	102
4.2.5	Data analysis	103
4.3	Results	105
4.3.1	Results of the behavioural data analysis . .	105
4.3.2	EEG data analysis	109
4.4	Discussion	117
4.4.1	Classifier probability distribution effect . . .	119
4.4.2	Implications for Levelt's language production model	120
4.5	Conclusion	122
4.6	Acknowledgements	122
4.7	Disclosure statement	122
4.8	Funding	122
	Appendix 4	123
5	General Discussion	131
5.1	Implications of the results described in this thesis .	133
5.2	Looking beyond Levelt's model of language production	134
5.2.1	The implications of the organization of semantic network	134
5.3	Limitations and future work	138
	References	141
	English summary	149
	Nederlandse samenvatting	153
	Curriculum Vitae	157

Acknowledgements

This thesis would never have been completed without the guidance of my supervisors, Prof. dr. Niels O. Schiller and Dr. Jurriaan Witteman. Niels, your insightful advice over the years has been invaluable. Jurriaan, you've helped me get “unstuck” more times than I can count—thank you for your support with writing and critical thinking.

A heartfelt thanks to my fellow lab colleagues and friends, especially Jin Wang, Ruixue Wu, and Anne Hiebert. Thank you for sharing the ups and downs of the PhD journey. To Katja Lubina—thank you for always having our backs throughout this entire process. To Jos Pacilly and Andreea Geambaşu, the best lab technician and lab manager—thank you!

Above all, I am deeply grateful to my parents, Shuxin and Shulin. You have instilled in me persistence and given me the courage to face life's difficulties and moments of meaninglessness. Whenever I felt like giving up, it was your strength and love that kept me going. Thank you for your hard work in raising me and for giving me the opportunity to live a life so different from your own. Thank you for trying to understand me. Your health, happiness, and well-being are what I wish for most in this world.

To my grandma, the time I spent living with you during my childhood is a lifelong treasure. Thank you for teaching me so much about life. To my dear friends—Xueqin, Jiliang, and Lin—thank you for your enduring kindness, help, and understanding. Knowing

you and staying friends over the decades is a true blessing.

My deepest gratitude goes to my partner, Stefan Raaijman. Thank you for your love, patience, encouragement, and help with writing. Without you, I might still be stuck on the first manuscript. Thank you for your cooking and pep talks during the moments I doubted myself or thought I couldn't finish this PhD thesis. Thank you for understanding the differences in our backgrounds, especially when I worry about my parents.

Articles in this thesis

This thesis consists of a series of experiments and their corresponding research article as the following. Note that the articles are in ascending order based on the chapter number.

Wang, Y., Witteman, J., & Schiller, N. O. (2024). The role of animacy in language production: evidence from bare noun naming. *Quarterly Journal of Experimental Psychology*, 78(7), 1461-1473. (Original work published 2025) [Chapter 2]

Wang, Y., Witteman, J., & Schiller, N. O. (Under review). Activation of classifiers in word production: insights from lexico-syntactic probability distributions. *Brain Research*. [Chapter 3]

Wang, Y., Witteman, J., & Schiller, N. O. (2025). Activation of classifiers in word production: insights from lexico-syntactic probability distributions. *Language, Cognition and Neuroscience*, 40(7), 987–1001. [Chapter 4]
