CURRICULUM VITAE

Thijs Sluiter was born on September 3rd 1998 in Amsterdam, the Netherlands. In 2010, he began his pre-university education (gymnasium) at Willem de Zwijgercollege in Bussum, graduating in 2016. That summer, he enrolled in medical school at Leiden University Medical Center (LUMC). In the fall of 2018, he spent a semester studying at the University of Edinburgh.

After completing his bachelor's degree, Thijs joined the vascular surgery research lab of Dr. Margreet de Vries and Prof. Dr. Paul Quax at LUMC. In November 2019, he moved to Boston to work under the supervision of Dr. Peter Kip, Prof. Dr. C. Keith Ozaki, and Prof. Dr. J.R. Mitchell, focusing on preoperative dietary restriction to improve outcomes in vascular surgery.

Driven to spur his academic career, Thijs began his PhD in July 2020, supported by a grant from the Rembrandt Institute for Cardiovascular Sciences awarded to Dr. Margreet de Vries, Dr. Stephan Huvaneers (Amsterdam UMC, location AMC), and Prof. Dr. Jaap van Buul (Sanquin and Amsterdam UMC, location AMC). The results of this collaborative project are presented in this thesis. From August to December 2024, he continued his research as a postdoctoral fellow in Dr. M.R. de Vries her group.

In February 2025, Thijs commenced his clinical internships to complete his medical training. He currently resides in The Hague with his partner and their son Fedde. Looking ahead, he aspires to become a clinician-scientist specializing in cardiovascular medicine.

DANKWOORD

The work described in this thesis is the result of a team effort and therefore requires appreciation of all those involved.

Dr. de Vries, dear Margreet, thank you for the trust you've always placed in me—it was an honor to be hired on your first major personal grant and to witness and contribute to the growth of your research group. I truly value the strong professional and personal bond we've built over the years and look forward to continuing our fruitful collaboration.

Prof. dr. Quax, dear Paul, thank you for recognizing my enthusiasm early on and for the trust you showed by sending me to Boston—it truly sparked my passion for science and vascular biology. Your ability to see the bigger picture, connect with others, and guide people toward their goals, is something I've always admired.

Prof. dr. Ozaki, dear Keith, the way you combine top-notch research with clinical work, is something I can only aspire to do. Your continuous effort to improve your own skills and transfer them to your fellows, whilst also enjoying life and capturing special moments on camera, is unique and has made a significant impact on me and many others.

Dear Erna, without you the whole vascular research group would collapse. Not only are you a laboratory magician, but also an extremely pleasant person to work with who is always supportive. Your optimism and work ethic are unparalleled and I am proud to call you my friend and paranymp.

Special thanks to all other PhD-candidates and post-docs of the vascular surgery research group, Laura, Peter, Eva, Alwin, Tamar, Judith, Vincent, Kayleigh, Nicky and Eduard, it was a pleasure working with you.

All collaborators, especially the Rembrandt team, Rianne, Stephan and Jaap, thank you for your criticism, scientific input and the fun that we have had during our meetings.

All students, specifically Remco, Raghed, Michelle, Lineke, Takumi, Celine and Britt; I am very proud of your achievements and eager to follow your professional and personal milestones in the future. I hope that you have enjoyed your internship as much as I did.

All my friends and family, it is hard to describe how important you are to me. Through thick and thin we support each other and will continue to do so in the future.

And a special thanks to Annette, Cecile, Edgar, Milou, Noor, Piet Hein, Ruben, Sem and Vivian, I always value your support, advice and comments. Even on the things which I do wrong (in your eyes). We are very close and you have given me a perfect upbringing and provided extremely fertile ground to develop myself as a person.

Lieve Taya, meeting you is the best thing that has happened to me. I look forward to everything that is yet to come.

Lieve Fedde, because of you I got promoted from boy to father, and the love that I feel for you is unprecedented.
