Destroy, Create Transform and Sublimate

Laboratory Dissociation Studies on Polycyclic Aromatic
Hydrocarbons and Analogues

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 22 oktober 2025
klokke 10:00 uur
door

Jerry Kamer

geboren te Zoetermeer, Nederland
in 1995

Promotores: Prof. dr. A. G. G. M. Tielens
Prof. dr. H. V. J. Linnartz †

Copromotor: Dr. J. Bouwman CU Boulder

Promotiecommissie: Prof. dr. I. A. G. Snellen
Prof. dr. S. Viti
Prof. dr. M. A. Duncan University of Georgia
Prof. dr. R. I. Kaiser University of Hawaii
Dr. S. Brünken Radboud University
Dr. A. Candian University of Amsterdam

ISBN: 978-94-6496-453-0

Cover:

Title and subtitle designed and made by Echo Graphic

Background painted by Nienke Brouwer

Layout done by the author

Title heavily inspired by: Destroy Create Transform Sublimate by Destrage

"Ik heb 'm nooit gezien, maar toch moet tie echt bestaan."

CONTENTS

1	Introduction	1
1.1	Presence of PAHs in space	3
1.1.1	The aromatic infrared bands	4
1.1.2	Current detections of aromatic molecules	6
1.1.3	PAH contribution to other cosmic environments	8
1.2	The AIB mismatch	9
1.2.1	Nitrogen atom inclusion in PAHs	9
1.3	Processing PA(N)Hs in the ISM	10
1.3.1	Formation of PA(N)Hs in space	11
1.3.2	Photodissociation of PA(N)Hs	12
1.4	Thesis contents	14
1.5	Future perspectives	16
2	Methodology	19
2.1	i^2 PEPICO system	19
2.2	Quadrupole ion traps	20
2.2.1	Ion trapping	21
2.2.2	Mass isolation	22
2.2.3	Infrared multiple photon dissociation	24
2.2.4	Mass spectrometry	25
2.2.4.1	Voltage ramping	25
2.2.4.2	Reflectron Time-of-flight	25
2.3	Computational	28
3	Threshold Photoelectron Spectrum and Dissociative Photoionization of Benzonitrile	31
3.1	Introduction	32
3.2	Methods	34
3.2.1	Experimental	34
3.2.2	Computational	35
3.3	Results	35
3.3.1	Threshold photoelectron spectroscopy	35
3.3.2	TOF mass spectra and breakdown diagram	36
3.3.3	Potential energy surface	38
3.3.4	Modeling the breakdown diagram and TOF mass spectra	41
3.4	Discussion and conclusions	42
3.4.1	Astrophysical implications	43

3.A	Appendices	45
3.A.1	TPES overview	45
3.A.2	Benzonitrile excited state structures and their Cartesian coordinates	45
3.A.3	Detailed description of the PES	50
3.A.4	(Bicyclic) <i>meta</i> -benzyne molecular orbitals	56
4	IR Spectra of Cationic 1,5,9-Triazacoronene and Two of its Cationic Derivatives	59
4.1	Introduction	60
4.2	Methods	62
4.2.1	Experimental	62
4.2.2	Computational	62
4.3	Results	62
4.3.1	Mass spectrometry	62
4.3.2	TAC^{•+} IRMPD spectroscopy	63
4.3.3	TACH⁺ IRMPD spectroscopy	66
4.3.4	[TAC-H+H₂O]⁺ IRMPD spectroscopy	67
4.4	Discussion and Astrophysical implication	69
4.4.1	Comparison of the TAC^{•+} IRMPD to coronene ^{•+}	69
4.4.2	Comparison of the TAC^{•+} and TACH⁺ IRMPD spectra to interstellar emission bands	70
4.4.3	Possible astronomical relevance of oxygen-functionalized PA(N)Hs	72
4.5	Conclusions	72
4.A	Appendices	74
4.A.1	Experimental and simulated mid-IR spectra of TACH⁺ in the 800 – 1300 cm ⁻¹ range	74
4.A.2	Energies of [TAC-H]⁺ isomers	75
4.A.3	Calculated spectra of all considered [TAC-H+H₂O]⁺ isomers	75
4.A.4	Coordinates of TAC^{•+} and TACH⁺	78
5	Photoprocessing of Cationic Triazacoronene: Dissociation Characteristics of Polycyclic Aromatic Nitrogen Heterocycles in Interstellar Environments	81
5.1	Introduction	82
5.2	Methods	83
5.3	Results	85
5.3.1	Mass range m/z 300 – 320	85
5.3.2	Mass range m/z 200 – 299	87
5.3.3	Mass range m/z 103 – 199	88
5.4	Discussion	92
5.4.1	Differences between coronene and TAC	92
5.4.2	Astrophysical implications	95
5.5	Conclusion	96
5.A	Appendices	98
5.A.1	Synthetic procedures of TAC	98
5.A.1.1	Experimental	98
5.A.1.2	1,5,9-trinitrotriphenylene synthesis	98
5.A.1.3	Triphenylene-1,5,9-triamine synthesis	100

5.A.1.4	N,N',N''-(triphenylene-1,5,9-triyl)triformamide synthesis	102
5.A.1.5	1,5,9-triazocoronene synthesis	104
5.A.2	Example of Pearson IV fitted experimental data and its residual	106
5.A.3	TAC ^{•+} reactivity with acetylene (C ₂ H ₂)	107
5.A.4	Zoom-in of the hydrogen loss region from TAC ^{•+}	108
5.A.5	Dissociation mass spectra for m/z 320	109
5.A.6	Integrated intensities of all peaks from the Γ_{9-12} regions	110
5.A.7	Cor ^{•+} to TAC ^{•+} comparison for the Γ_{10-12} regions	113
6	Reactions of Coronene^{•+} Photodissociation Fragment Ions with Water in a room-temperature Quadrupole Ion Trap	117
6.1	Introduction	118
6.2	Methods	119
6.2.1	Experimental	119
6.2.1.1	Resonant ejection using a V_{RF} sweep	121
6.2.2	Computational	122
6.3	Results and discussion	122
6.3.1	Mass spectra for various V_{RF}	123
6.3.2	Chemistry of isolated dissociation fragments	123
6.3.3	Identification of the origin of reaction products	124
6.3.3.1	Reactions in the C ₇ H ⁺ mass region	126
6.3.3.2	Reactions in the C ₉ H ⁺ mass region	128
6.3.4	Effect of geometry on reactivity	129
6.3.5	Comparison to previous works on reactivity of C _{<i>n</i>} ^{•+} and C _{<i>m</i>} H ⁺	130
6.3.6	Potential energy surface of the C ₇ ^{•+} + H ₂ O reaction	131
6.4	Conclusions and astrophysical implications	133
6.A	Appendices	135
6.A.1	Coronene electron impact ionization mass spectrum	135
6.A.2	Experimental parameters	136
6.A.3	Mass spectra over the full m/z 50 to 310 range	137
6.A.4	Plotted intensity as function of β_z , for different β_z values . . .	139
6.A.4.1	The C ₇ H ⁺ mass region	139
6.A.4.2	The C ₉ H ⁺ mass region	139
7	Isomer Identification of Doubly-Dehydrogenated Naphthalene Radical Cations Formed by 30 eV Electron Ionization	143
7.1	Introduction	144
7.2	Methods	145
7.2.1	Experimental	145
7.2.2	Computational	146
7.3	Results and Discussion	146
7.3.1	IRPD spectrum of ddNaph ^{•+}	146
7.3.2	Isomer-type identification	146
7.3.3	Potential energy surfaces	151
7.4	Conclusions and astrophysical implications	154
7.A	Appendices	156
7.A.1	Experimental IRPD of ddNaph ^{•+}	156
7.A.2	Individual calculated anharmonic IR spectra	157
7.A.2.1	n, m -dd-Naph ^{•+} isomers	157

7.A.2.2 Isomers found in this study	162
