"People live with multiple sclerosis for decades, making it a disease of selves as well as cells." (Joy & Johnston, 2001)

TABLE OF CONTENTS

Chapter 1.	General introduction	10
Chapter 2.	The potential of diagnostic biomarkers for cognition	
2.1	A multi-modal marker for cognitive functioning in multiple sclerosis: The role of NfL, GFAP and conventional MRI in predicting cognitive functioning in a prospective clinical cohort.	40
Chapter 3.	The importance of network changes for cognition	
3.1	Coupling structure and function in early MS: How a less diverse repertoire of brain function could lead to clinical progression.	64
3.2	The constrained brain in multiple sclerosis: Cognitive impairment is related to higher modular coupling of structural and functional connectivity.	70
Chapter 4.	A fine-grained take on cognition	
4.1	Isolated cognitive impairment in people with multiple sclerosis: Frequency, MRI patterns and its development over time.	96
4.2	Identifying and understanding cognitive profiles in multiple sclerosis: A role for visuospatial memory functioning.	114
Chapter 5.	Cognition from a multidimensional perspective	
5.1	Understanding the complex network of objectively assessed cognition and self-reported psychological symptoms in people with multiple sclerosis.	150
Chapter 6.	The impact of cognitive impairment on daily life	
6.1	Cognitive functioning in everyday life: The development of a questionnaire on instrumental activities of daily living in multiple sclerosis.	198
6.2	Investigating the cognitive and physical impact of multiple sclerosis in day-to-day life: Validation of the MS-IADL-Q	216
Chapter 7.	Summary and General Discussion	260
Appendix.	Nederlandse samenvatting	305
	Dankwoord	312
	List of publications	315
	About the author	319
