This work was supported by a grant from the Leiden-Edinburgh joint PhD programme for Integrated One Health Solutions, awarded by the universities of Leiden and Edinburgh in December 2019.

Dissecting the role of the airway epithelium in mycobacterial infections

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 13 november 2025
klokke 13:00 uur

door

Amy Mascha Barclay-de Waal
geboren te Elburg
in 1996

Promotor

Prof. dr. T.H.M. Ottenhoff¹

Co-promotores

dr. S.A. Joosten¹

dr. A.M. van der Does²

Promotiecommissie

Prof.dr. L.G. Visser¹

Prof.dr. A.H. Meijer³

Dr. J.E.M. de Steenwinkel⁴

Table of contents

Chapter 1	General introduction	6
Chapter 2	Lung epithelial cells interact with immune cells and bacteria to shape the microenvironment in tuberculosis	28
Chapter 3	Airway epithelial cells mount an early response to mycobacterial infection	54
Chapter 4	Bronchial epithelial cells exposed to pathogenic mycobacteria undergo partial epithelial-to-mesenchymal transition	90
Chapter 5	Prior exposure of airway epithelial cells to mycobacteria reduces subsequent <i>Mycobacterium tuberculosis</i> infection and resulting inflammation	124
Chapter 6	Modulation of airway epithelial host responses to mycobacteria by acute cigarette smoke exposure	154
Chapter 7	Mycobacteria develop biofilms on airway epithelial cells and promote mucosal barrier disruption	192
Chapter 8	Summarising discussion	228
Appendices	Nederlandse samenvatting	258
	Curriculum Vitae	262
	List of publications	263
	Dankwoord	264
