Understanding Hypercoagulability:

Determinants and Impact on Cardiometabolic Disease

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 19 november 2025
klokke 11.30 uur

door

Jihee Han
geboren te Boryeong, Republiek Korea
in 1992

Promotor

Prof. dr. F.R. Rosendaal

Co-promotors

Dr. A. van Hylckama Vlieg

Dr. R. Li

Leden promotiecommissie

Prof. dr. R.H.H Groenwold

Prof. dr. P. E. Slagboom

Prof. dr. P.S. Wild (University Medical Center of the Johannes Gutenberg-University Mainz)

Dr. P. Schrauwen (German Diabetes Center)

Table of contents

Chapter 1	General introduction and thesis outline	7
Part I.	In-depth genetic exploration of coagulation parameters and venous thromboembolism	
Chapter 2	Genomic science of risk prediction of venous thromboembolic disease: convenient clarification or compounding complexity	23
Chapter 3	Association between venous thromboembolism-associated genetic variants, coagulation factor levels, and thrombin generation potential	45
Chapter 4	Genome-wide identification of loci associated with plasma coagulation factor IX activity	61
Chapter 5	Genome-wide meta-analyses and integrative multi-omics analysis of endogenous thrombin generation potential in the CROSSLINK consortium	81
Part II.	Pathophysiological mechanisms of hypercoagulability and its link to cardiometabolic disease	
Chapter 6	Sex-specific association between microvascular health and coagulation parameters: the Netherlands Epidemiology of Obesity study	109
Chapter 7	Association between high-density lipoprotein composition and coagulation factors in the Netherlands Epidemiology of Obesity study	129
Chapter 8	Association of coagulation factor levels and thrombin generation potential with the incidence of type 2 diabetes	147
Chapter 9	Summary and general discussion	165
Appendices		179
