# Performative Transactions:

## Worlding Compositional Ecosystems

**Proefschrift**

ter verkrijging van

de graad van doctor aan de Universiteit Leiden,

op gezag van rector magnificus prof.dr.ir. H. Bijl,

volgens besluit van het college voor promoties,

te verdedigen op vrijdag 21 november 2025

klokke 10:00 uur

Door

Adam Łukawski

geboren te Suwałki, Polen

in 1997

**Promotor**

Prof. dr. Richard Barrett

**Copromotores**

Dr. Paulo de Assis (Orpheus Institute, Ghent, Belgium)
Dr. Michiel Schuijer (Conservatorium van Amsterdam, The Netherlands)

**Promotiecommissie**

Prof. dr. Rachel Beckles Willson (secretaris)
Prof. dr. Kitty Zijlmans
Prof. dr. Artemi-Maria Gioti (Mozarteum University Salzburg)
Dr. Martin Zeilinger (Abertay University, Dundee, Scotland)

Dit proefschrift is geschreven als een gedeeltelijke vervulling van de vereisten voor het doctoraatsprogramma docARTES. De overblijvende vereiste bestaat uit een demonstratie van de onderzoeksresultaten in de vorm van een artistieke presentatie. Het docARTES programma is georganiseerd door het Orpheus Instituut te Gent.

Even systems that can shape themselves don't grow in isolation. This thesis, though concerned with recursive systems and self-modifying structures, had an emergence that was anything but autonomous. It has been shaped, supported, challenged, and cared for by many—human and non-human—whose contributions cannot be reduced to citations or code. What follows is a small gesture of thanks for the companionship, guidance, and moments of care that fully participated in its worlding.

I begin by thanking my promotor, Richard Barrett, whose guidance, attentiveness, and sharp critical insight have accompanied this project from its earliest stages. His ability to engage both rigorously and creatively with my ideas has been invaluable, and I am deeply grateful for the space he gave me to develop this work in my own voice. I wish to express my special thanks to Paulo de Assis, not only as co-promotor and my daily supervisor, but as indispensable intellectual companion throughout this trajectory. Our collaboration at the Orpheus Institute—within the MetamusicX research cluster—was more than a parallel context to this dissertation; it was an ongoing dialogue through which many of its core ideas took shape. Over the years, we developed a shared language for thinking and experimenting together—one that gave form to bold, adventurous, and deliberately unruly ideas that might not have found grounding elsewhere. Without Paulo's unwavering trust, critical acuity, and commitment to both Artistic Research and experimental thought, this dissertation would not be what it became. My heartfelt thanks also go to Michiel Schuijer, whose support and feedback remained generous and steady throughout the years. From guiding my earlier studies at the Conservatorium van Amsterdam to becoming a co-promotor of this doctoral trajectory, Michiel has been a consistent presence and a thoughtful reader of both my music and ideas.

At Leiden University, I am grateful to the Academy of Creative and Performing Arts (ACPA). I thank Erik Viskil, ACPA's Academic Director, for his kind support throughout the process. I am thankful to Rosalien van der Poel, the Institute Manager, whose generosity, precision, and guidance were a constant source of reassurance. I would also like to acknowledge the Leiden University Centre for Digital Humanities, whose resources provided foundation to some of the digital aspects of this research. My heartfelt thanks go to the Orpheus Institute. I am particularly grateful to the Director Peter Dejans who created an environment where experimental artistic work

could flourish with confidence and ambition. I thank the docARTES coordinators Joost Vanmaele, and Luk Vaes for their generous guidance and responsiveness throughout the trajectory. I am grateful to my colleagues from the MetamusicX research cluster—Martin Zeilinger, Ilpo Jauhainen, Alicia Reyes, Diego Castro Magas, and Paolo Giudici—for their presence, feedback, and companionship throughout these years. I also wish to thank Kathleen Snyers, Heike Vermeire, and Kayo Quintens for their steady and thoughtful support at every step—their presence not only behind the scenes made a world of difference. I would like to thank Jonathan Impett, Einar Torfi Einarsson, Gabriel Paiuk, Tiziano Manca, Marek Poliks, and Roberto Alonso Trillo for enabling various platforms and exchanges that became crucial to the development of this research. I also wish to thank the Conservatorium van Amsterdam and the Iceland University of the Arts for offering the space and trust to develop and teach my experimental course. I am especially grateful to the talented students who participated—thank you for your courageous approaches, sharp observations, and fearless creative experimentation.

Thank you to Michał Skarzyński, whose technical expertise, patience, and creativity were instrumental in bringing the ideas of this dissertation into working systems. From countless conversations to the long hours of collaborative problem-solving, his ability to think across code and use-case was vital to translating my ideas into executable form. Working with Michał was a reminder that building systems can also mean building trust, clarity, and shared excitement for what art and technology can become. Thank you to my friends Ramin Amin-Tafreshi, Nuno Lobo, Alexandra Pouta, Alex Tay, Boris Bezemer and Wiktor Piechowski for your support.

I want to thank my parents Agnieszka and Tomasz, my sister Gabriela, my parents-in-law Jola and Kornel, and my sister-in-law Iga for their unwavering support throughout this long and often complex journey. Whether through practical help, emotional grounding, or simply the confidence that I would find my way, your presence was a vital foundation.

To Julia, my wife, my partner, and my constant companion—thank you for walking this path with me. For your love, your clarity, your strength. For holding the centre when I got lost in abstractions, and for reminding me why it all matters. For your sense of humour, your care, and your fierce intelligence. This work may bear my name, but its rhythm has always been ours.
