Optimizing Solvers for Real-World Expensive Black-Box Optimization with Applications in Vehicle Design

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 27 november 2025
klokke 16:00 uur

door

Fu Xing Long

geboren te Pulau Pinang, Malaysia
in 1993

Promotores:

Prof. Dr. T.H.W. Bäck

Prof. Dr.-Ing. M. Gitterle (Munich University of Applied Sciences, Germany)

Co-promotor:

Dr. N. van Stein

Promotiecomissie:

Prof. Dr. M.M. Bonsangue

Prof. Dr. A. Plaat

Prof. Dr. K.J. Batenburg

Dr. E. Raponi

Prof. Dr.-Ing. F. Duddeck (Technical University of Munich, Germany)

Dr. M. Gallagher (University of Queensland, Australia)

This thesis was written as part of the joint project newAIDE under the consortium leadership of BMW AG with the partners Altair Engineering GmbH, divis intelligent solutions GmbH, MSC Software GmbH, Technical University of Munich, TWT GmbH. The project is supported by the Federal Ministry for Economic Affairs and Climate Action (BMWK) on the basis of a decision by the German Bundestag.

*“The greatest challenge to any thinker is stating the problem in a way that will allow
a solution.” – Bertrand Russell*

Contents

1	Introduction	1
1.1	Thesis Objective	2
1.2	Research Questions	4
1.3	Thesis Outline	6
1.4	Author's Contributions	7
2	Preliminaries	11
2.1	Black-Box Optimization	11
2.1.1	State-of-the-art Optimization Algorithms	12
2.1.2	Black-Box Optimization Benchmarking Suite	16
2.2	Fine-tuning of Algorithm Configuration	18
2.3	Exploratory Landscape Analysis	20
2.4	Automotive Crashworthiness Optimization	21
2.4.1	Surrogate-based Optimization Approaches	22
2.4.2	Alternative Optimization Approaches	26
3	Landscape Analysis of Engineering Optimization Problems in Auto- motive Crash	29
3.1	Capturing the Landscape Characteristics of Optimization Problems . .	30
3.1.1	Landscape Features using ELA	30
3.1.2	DoE2Vec: A Feature-free Approach using Autoencoder	35
3.2	Analyzing the Function Properties of BBOB Instances	42
3.2.1	Landscape Characteristics based on ELA Features	43
3.2.2	Algorithm Performance across Instances	47
3.2.3	Global Function Properties	49
3.2.4	Summary	49

Contents

3.3	Landscape Characteristics of Automotive Crashworthiness Optimization	51
3.3.1	Optimization Problem Classes	52
3.3.2	Comparison against Vehicle Dynamics Problems	58
3.4	Conclusions	59
4	Representative Functions for Hyperparameter Optimization	63
4.1	Tree-based Randomly Generated Functions	63
4.1.1	Visualization of Representative Functions for BBOB	66
4.1.2	Representative Functions for Automotive Crash Problems	68
4.2	Representativeness for Fine-Tuning of Algorithm Configuration	69
4.2.1	Performance Metric	72
4.2.2	Optimization Performance of ModCMA	73
4.2.3	Optimization Performance of BO	77
4.2.4	Identifying Appropriate Representative Functions	79
4.3	Guiding the Function Generation using Genetic Programming	81
4.3.1	ELA-guided Function Evolution using GP	82
4.3.2	Result Discussion	84
4.3.3	Limitations of GP-based Function Generator	91
4.4	Conclusions	93
5	Efficiently Solving Expensive Black-Box Optimization Problems	97
5.1	Surrogate-based Landscape-aware Optimization Pipeline	98
5.2	Fine-Tuning of Optimization Configurations for BBOB Functions	101
5.2.1	Experimental Setup	102
5.2.2	Empirical Assessment of Optimization Performances	104
5.3	Real-World Expensive Automotive Crashworthiness Optimization	109
5.3.1	FE Submodel for Automotive Side Crash	109
5.3.2	Load Case A – Single Pole Impact	110
5.3.3	Load Case B – Multi-Pole Impact	115
5.4	Landscape-aware HPO using RGFs and deep NN models	118
5.4.1	Multi-output Mixed Regression and Classification	120
5.4.2	Experimental Setup and Result Discussion	121
5.5	Conclusions	127
6	Conclusions and Future Work	131
6.1	Conclusions	131
6.2	Future Work	134

Bibliography	137
Acronyms	155
Samenvatting	159
Summary	163
