Pollinators in complex landscapes

Modelling and mapping the distribution of wild bees and hoverflies in the Netherlands

Merijn Moens, 2025. Pollinators in complex landscapes
Modelling and mapping the distribution of wild bees and hoverflies in the Netherlands
PhD thesis, University of Leiden, The Netherlands

ISBN: 978-90-9040789-0

Cover design by Merijn Moens, with photo editing by Zina Broeksma.
Layout and printed by Drukkerij De Bink bv

This thesis was carried out at Naturalis Biodiversity Center and Leiden University. The thesis was funded by the Multisectoral Analysis of climate and land use change impacts on Pollinators, Plant diversity and crops Yields (MAPPY) project. The MAPPY project is part of AXIS, an ERA-NET initiated by JPI Climate, and funded by FFG (Austria), F.R.S.-FNRS and BELSPO (Belgium), DLR/BMBF (Germany), NWO (Netherlands) and AEI (Spain) with co-funding by the European Union (Grant No. 776608). Three months of extension were funded by Naturalis Biodiversity Center.

Pollinators in complex landscapes

Modelling and mapping the distribution of wild bees and
hoverflies in the Netherlands

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 10 december 2025
klokke 10.00 uur

door
Merijn Moens
geboren te Leiderdorp, Nederland
in 1994

Promotores:

Prof. Dr. J.C. Biesmeijer

Prof. Dr. H.A.C. Runhaar (Utrecht University)

Co-promotor:

Dr. L. Marshall

Promotiecommissie:

Prof. dr. ing. M.G. Vijver

Prof. dr. ir. P.M. van Bodegom

Prof. dr. L.S. Bakker (Wageningen University & Research)

Prof.dr.ir. T.M. Bezemer

Dr. Y. Si

Dr. O. Schweiger (Helmholtz Centre for Environmental Research)

For my dad,
† Leiden, 15-02-2023

*Maar we zouden niet vergeten dat
we hebben gelachen, gelachen hebben
we veel en dat zal ik niet vergeten
Want we hebben gelachen en veel hè*

...

Table of contents

Chapter 1: General introduction	2
Chapter 2: Are threatened species special: an assessment of Dutch bees in relation to land use and climate?	10
Chapter 3: The importance of biotic interactions in distribution models of wild bees depends on the type of ecological relations, spatial scale and range.	30
Chapter 4: Linear landscape elements improve fine scale species distribution models of bees and hoverflies	48
Chapter 5: Landscape elements as pollinator sanctuaries: bee and hoverfly diversity and community composition in agricultural habitats of the Netherlands.....	64
Chapter 6: General discussion	76
Supplementary materials	84
References	108
I. Summary	130
II. Samenvatting	131
III. Acknowledgements	133
IV. Curriculum vitae.....	135
