Curriculum Vitae

Qiao Zhao was born on October 27, 1993, in a small city in China called Jinzhou. At the age of thirteen, he moved to Shenyang. He attended Northeast Yucai School for both middle and high school. In 2012, he was admitted to China Medical University to study clinical medicine. He got his bachelor's degree in clinical medicine in 2017 and then started to conduct research on the role of non-coding RNAs in coronary atherosclerosis, in China Medical University affiliated Shengjing Hospital. During this period, he learned about non-coding RNAs and acquired laboratory techniques. Because of his background knowledge in non-coding RNAs, after obtaining his master's degree, he fortunately joined the research group of Anton Jan van Zonneveld and Roel Bijkerk at Leiden University Medical Center. He began studying the mechanisms of non-coding RNAs in chronic kidney disease. His main focus was on miRNAs, long non-coding RNAs, and yRNAs. During his time as a PhD candidate, he broadened his knowledge and learned many new techniques and gained a deeper understanding of scientific research. After completing his PhD, he will return to Shenyang, the city where he lives now, and become a doctor.

Acknowledgements

I would like to express my deepest gratitude to my promotor, Anton Jan. I always remember your words during my first-time interview: "No matter what, we will bring you here." Thank you for giving me the invaluable opportunity to work and learn in this research group.

My sincere thanks also go to Roel, my daily supervisor and my dear friend. You have given me a profound understanding of scientific research. When my experiments yielded negative results, you always encouraged me, saying, "Every result has its reason," and then guide me in uncovering the causes behind those outcomes. Under your mentorship, I came to realize two things, negative results are nothing to fear, and you are the best supervisor in the world.

Then I would like to thank to my fellow members in the research group—Loïs, Juliette, Novella, Hayat, Rudmer, and Jacques. Your companionship has made my Dutch journey both enjoyable and memorable. Oh Nee, maybe I shouldn't call it "journey", cause with you all around, I felt just as warm and comfortable as being at home.

Thanks to all the members of the Nephrology Department—Joris, Bernard, Zhuotao, Lushun, Gangqi, Rosalie, Suzanne, Sabinne, Nick, Ni Made, and Kanchana. Your insightful feedback during our meetings has been immensely helpful.

I would also like to thank my other office mates in the K5, Heein, Marlon and Marleen. Working and playing with you guys brought me so much joy.

Thanks to all technicians of the D-2 Laboratory—Ka Lei, Annemarie, Wendy, Richard, and Rob. Thank you for welcoming me into the lab and assisting me with the challenges I encountered in my experiments.

Thanks go to my colleagues in the D-2 Lab—Falk, Araci, Dongyue, Bas, Fangchen, Dagmar, Cathelijne, Jurrien, and Redouan. I truly appreciate your support whenever I faced difficulties in my work.

Thanks to my wife, Yucen. Spanning 8,000 kilometers, love revealed its true nature: unlike any force in physics, it grows stronger, not weaker, with the square of the distance. And also, thanks to my parents for your unwavering support.

And finally, thanks to my days and nights in Leiden—the birdsong at dawn, the starlit skies at night. I, with all my soul, wandered in this small and cozy city. I will forever carry with me the memories of all of it: the people, the experiences, the moments, the emotions, and the scenes. It brings to mind Hermione's words: "Me? Books and

cleverness! There are more important things—friendship and bravery." My profound thanks to each of you for providing me friendship and bravery throughout these four and a half years. If Leiden were a Horcrux, it would be a gentle one—safeguarding a part of my soul within its walls.

Thank you Leiden, and thank you all.
