## Oral and poster communications:

- 2024 **EFMC-ACSMEDI MedChem Frontiers** (poster)  
Utrecht, the Netherlands
- 2023 **LACDR Spring Symposium** (poster)  
Leiden, the Netherlands
- 2022 **ONCODE annual scientific meeting** (poster)  
Amsterdam, the Netherlands
- 2022 **ULLA summer school** (poster)  
Uppsala, Sweden
- 2022 **FIGON Dutch Medicines Day & Eufeps Annual meeting** (poster)  
Leiden, the Netherlands
- 2022 **LACDR Spring Symposium** (poster)  
Leiden, the Netherlands
- 2021 **LACDR Spring Symposium** (poster)  
Leiden, the Netherlands
- 2020 **LACDR Spring Symposium** (poster prize)  
Leiden, the Netherlands

# Curriculum vitae

Chenlin Feng was born on July 15<sup>th</sup>, 1992, in Luoyang, He'nan province, China. From 2010 to 2015, he studied at Shandong University, school of public health and obtained his bachelor's degree. From 2016 to 2019, he joined the master's program of Peking Union Medical College under the supervision of Prof.dr. Jiandong Jiang and obtained his master's degree in pharmacology. His master projects focused on pharmacodynamic evaluation of natural products in colorectal cancer treatment using both in vitro and in vivo models, and the mechanism of action including gut microbiota regulation. He was awarded the outstanding graduate of 2019.

In September 2019, he moved to Leiden, the Netherlands to perform his PhD research at Leiden Academic Center for Drug Research, under the supervision of Prof. Dr. Laura Heitman and Prof. Dr. Erik Danen. His PhD program was sponsored by the China Scholarship Council until August 2023 and afterwards sponsored by Leiden University and ONCODE institute. His projects focused on ligand-target interaction and modulation of G protein-coupled receptor pharmacology in cancer, with special interests in characterization of cancer-associated mutations in adenosine A<sub>2A</sub> receptor and serotonin 5-HT<sub>2C</sub> receptor. From April 2025 to August 2025, he worked as a postdoc researcher in Prof. Dr. Laura Heitman's group to continue the investigation of targeting adenosine receptors in breast cancer treatment.

At the moment of writing this paragraph, Chenlin is exploring his next career steps, seeking to apply his research expertise, scientific curiosity, and passion for drug development.

# Acknowledgements

At the end of my PhD, I want to express my gratitude to many people. But before that, I want to take a moment to encourage myself. I still remember my very first day as a PhD candidate, on September 17th, 2019, when Lia welcomed me at the reception and guided me through the Gorlaeus building to the lab. There I met my supervisors and new colleagues, full of excitement for the years that lay ahead. Looking back, I was perhaps overly optimistic about what it meant to pursue a PhD. Even though I believed I was ready for the challenge, there were many moments when I doubted whether I could truly make it. Today, I am grateful that I did not give up and that I have made it to the finish. More importantly, I am deeply thankful for the support of so many wonderful people, without whom my growth and accomplishments would not have been possible.

I would like to thank my promotors, Laura and Erik, for giving me the opportunity to embark on this unique journey. During our first online interview on January 30th, 2019, Laura asked me whether I would feel sad about leaving my family and friends behind to pursue a PhD in a faraway country. My answer was certainly yes. What I did not know then is that, six years later, I would have built a family here and gained more cherished friends. The more happiness and memories we share, the more reluctant I am to accept the long distance between China and the Netherlands. Thank you for your guidance and constant support. You taught me what it takes to be an independent researcher, a patient mentor, and a hardworking and supportive team member. Thank you for always being willing to listen, for sharing your experiences and wisdom, and for consistently respecting my opinions and encouraging me through every small step, no matter it was a success or a moment of trial and error.

I would also like to thank my colleagues and friends for their countless kindness. Thank you, Xuesong, Rongfang, Xue, Xuhan, Lizi, and Yao, for making me feel close to home and for your generous help, both personally and academically. Thank you, Lisa, Bert, Jara, Natalia, Cas, Tamara, Marina, Mijlen, Huub, and my new officemate Lisa, for all the fun conversations that relieved my stress, for the scientific brainstorming, for caring when you notice I was feeling down, and for understanding my quiet nature when I wasn't good at expression myself and was often the person standing in the corner at parties. Thank you, Anita, Bircan, Klara, Cecelia, Sabine, Annaloes, and Elsa, for your great support in the lab. Special thanks to my students, Denise, Karan, Reno, and Jasper, for choosing to work with me on these projects and for your excellent contributions to this thesis. Your trust and feedback helped me become a better teacher.

I would like to thank my dearest friends, besides those already mentioned above. To Fujia, Congrou, Dongdong, Xiaoyu, Yihui, Mafei, Liuyang, Lilei, Huangshuai, Huihui, Hongjuan, Zhenwei, Xiaohang, Jiaqi, Hanyu, Shibo, and Dingjia: thank you for your support, whether nearby or from different parts of the world. You have no idea how much strength I gained from you, and from knowing that you will always remain my friends. To my badminton fellows, Abel, Ludo, Ifan, Kshitij, Faseeh, Lu, Aniruddh, Peng, Yufan, Yiran, Sean, Daoyi, Ruoxi and Hu, thank you for all the fun and companionship. I might have finished my Phd earlier if I spent less time playing

with you, but more likely I may get depression and quit already. Thanks for never complaining about me being the weak point in the team, and it's wonderful to be able to enjoy the game together, whether win or lose. To our cat Yumi: thank you for being such adorable and bringing so much joy and peace.

To my wife Wenyi: you are the greatest surprise and blessing of this journey. Thank you for believing in me, embracing my imperfections, celebrating my wins and grieving my losses. Thank you for walking with me through every unexpected twist and turn and supporting every decision I made. Thank you for always being there for me and making me feel deeply loved and needed.

To my parents: your son earned his doctor's degree over a longer period than expected, but he has also grown into a more upright, mature, and persevering person. I know you are proud of me, as I am proud to be your son.
