Extracellular Matrix Mechanics in the Regulation of the early steps of the Metastatic Cascade

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van waarnemend rector magnificus,
volgens besluit van het college voor promoties
te verdedigen op vrijdag 23 januari 2026
klokke 10:00 uur

door
Klara Beslmüller
geboren te München, Duitsland
in 1993

Promotores: Prof. dr. E. Danen, Prof. dr. T. Schmidt

Co-promotor: Dr. E. Neubert

Promotiecommissie:

Prof.dr. M. van Eck

Prof. dr. E.C.M de Lange

Dr. A. Mashaghi Tabari

Prof.dr. M.J. Jager (Leiden University Medical Center)

Dr. P. Boukany (TU Delft)

The research described in this thesis was performed at the division Drug Discovery and Safety of the Leiden Academic Centre for Drug Research (LACDR), Leiden University (Leiden, The Netherlands).

This work is part of the research program “The Active Matter Physics of Collective Metastasis” with project number Science-XL 2019.022, which is financed by the Dutch Research Council (NWO).

*Dedicated to my partner Ben, who always believed in me.
To my younger self, who decided to go through this challenging life experience.*

Contents

Chapter 1: Introduction, aim, and outline	9
Chapter 2: Impact of ECM stiffness on cancer cell migration and tumor invasion	27
Chapter 3: Cytochalasins suppress 3D migration of ECM-embedded tumoroids at non-toxic concentrations	61
Chapter 4: Laminin in breast cancer metastasis	93
Chapter 5: Polymerization but not receptor engagement underlies suppression of breast cancer migration in collagen fiber networks by laminin	113
Chapter 6: ECM remodeling by uveal melanoma drives invasion and connects to poor patient outcomes	139
Chapter 7: Disentangling the interplay between cell-cell and cell-matrix interactions in cancer cell migration	185
Chapter 8: Summary, discussion, and future perspectives	225
Appendix	237
