Elucidating DUX4-mediated molecular mechanisms underlying FSHD pathophysiology using multi- omics approaches

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr. S. de Rijcke,
volgens besluit van het college voor promoties
te verdedigen op vrijdag 13 februari 2026
klokke 10:00 uur

door

Dongxu Zheng

geboren te Renqiu, China
in 1993

Promoter:

Prof.dr.ir. S.M. van der Maarel

Co-promoter:

Dr. A. van den Heuvel

Dr. A. Mahfouz

Promotiecommissie:

Prof.dr. N. Geijsen

Prof.dr. S. Tapscott (Fred Hutchinson Cancer Center)

Prof.dr. P. Pijnappel (Erasmus Medical Center)

Dr. L. Clemens-Daxinger

The studies described in this thesis have been performed at the department of Human Genetics, Leiden University Medical Center, The Netherlands.

Table of Contents

CHAPTER 1

General introduction	9
----------------------------	---

CHAPTER 2

snRNA-seq analysis in multinucleated myogenic FSHD cells identifies heterogeneous FSHD transcriptome signatures associated with embryonic-like program activation and oxidative stress-induced apoptosis.....	51
---	----

CHAPTER 3

Single-fiber RNA sequencing reveals fiber-level transcriptomic heterogeneity and DUX4 activation in FSHD muscle biopsies	93
--	----

CHAPTER 4

Three-dimensional tissue engineered skeletal muscle modelling facioscapulohumeral muscular dystrophy	115
--	-----

CHAPTER 5

DUX4 activates common and context-specific intergenic transcripts and isoforms..	175
--	-----

CHAPTER 6

General discussion	251
--------------------------	-----
