ACKNOWLEDGEMENTS

First, I would like to thank everyone who supported me during my PhD. This journey could not have been completed without the support of many people.

Specifically, I would like to thank Suzan for being my supervisor during these years. I especially appreciated your openness to ideas and the freedom you gave me during my PhD. Also, I greatly admired your compassion during the ups and downs of this journey, as well as the way you guided me through the unknown seas of my research. You helped me build my research career, and I am very grateful for your support.

I also wish to thank Leif for being my co-supervisor. I still remember the joyful supervision meetings and brainstorming sessions over breakfast in cafes in Glasgow. You helped me shape my research around evaluation methodologies, and I greatly appreciated working through ideas together over these years.

I would also like to express my gratitude to Maarten for his co-supervision. It was truly a privilege to work with you. I especially appreciated your ability to refine ideas through clear reasoning and strong representation. Your guidance helped me grow as a researcher, both scientifically and in my career development.

I would like to thank all members of the eBay Core AI group, and in particular Hadi, for being a wonderful mentor. I thoroughly enjoyed my time at the eBay office. This experience played an important role in shaping my professional path, and our collaboration helped me broaden my perspective beyond academia, for which I am very grateful.

Arian, thank you for being such a close friend and collaborator. What a journey we shared. I still remember the day you picked me up at the train station for the first time I came to the Netherlands, never imagining how much time we would spend together working. The number of hours we spent discussing ideas and research is countless (and often surprising to others!). Our discussions were not only scientific, but also full of joy and laughter. I am especially happy and grateful that we shared this journey together.

I am grateful to all my DoSSIER companions, with whom we created numerous memories during retreats, summer schools, conferences, and research visits. I would like to especially thank Allan, who initiated the project and made this journey possible in the first place. It was a pleasure to grow together with all the PhD students in the project.

To all my collaborators, Suzan, Leif, Maarten, Arian, Zhaochun, Evangelos, Hadi, Mohammad, Wessel, Roxana, Chuan, and Gabriella, thank you for the productive and enjoyable collaborations. I truly appreciated every opportunity to work with you.

I am grateful to everyone at LIACS for creating such a supportive and pleasant working environment. In particular, I would like to thank colleagues and friends

from the TMR lab, with whom I shared many enjoyable moments.

My thanks also extend to Michiel and Arian for being my paranymphs and for their help and support.

To all current and former IRLab members and friends at the University of Amsterdam, thank you for making me feel welcomed throughout my PhD. I truly valued being part of such a great group.

I also extend my sincere thanks to my close friends in the Netherlands, who were true companions through the most challenging days of the past few years. Words on this page are not enough to express how grateful I am for your support and for always being there.

Finally, I am deeply grateful to my parents for their constant love, encouragement and support. They nurtured my curiosity and enthusiasm for learning, and none of this would have been possible without them.

CURRICULUM VITÆ

Amin is currently an NLP/LLM Data Scientist at ING, a Dutch multinational banking and financial services corporation. Prior to joining ING, he was a PhD researcher at the Leiden Institute of Advanced Computer Science (LIACS), Leiden University, where he began his doctoral studies in 2021 under the supervision of Suzan Verberne, Leif Azzopardi, and Maarten de Rijke. During his PhD, Amin took courses on scientific conduct, among others. His research focused on the evaluation of language models for conversational and search systems. In 2022, Amin completed a research visit at the University of Strathclyde under the supervision of Leif Azzopardi. In 2023, he conducted a research visit at the University of Amsterdam under the supervision of Maarten de Rijke. From January to March 2025, Amin worked within the Core AI group at eBay under the supervision of Hadi Hashemi. His work there focused on human preference alignment in large language models. Before starting his PhD, Amin earned a bachelor's degree in computer engineering followed by a master's degree in artificial intelligence from Amirkabir University of Technology (Tehran Polytechnic) in 2019.
