Mathematical models for mechanically induced morphogenetic pattern formation

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr. S. de Rijcke,
volgens besluit van het college voor promoties
te verdedigen op woensdag 11 maart 2026
klokke 16:00 uur

door

Daphne Natalie Nesenberend

Promotores:	Prof.dr. A. Doelman	
	Prof.dr. R.M.H. Merks	
Co-promotor:	Dr. F.W.J. Veerman	
Promotiecommissie:	Prof.dr.ir. G.L.A. Derks	
	Prof.dr. H.J. Hupkes	
	Prof.dr. A. Marciniak-Czochra	(Heidelberg University)
	Prof.dr. P.K. Maini	(Oxford University)
	Dr. S.C. Hille	
	Dr. A.L. Krause	(Durham University)

Contents

1	Introduction	1
1.1	Morphogenesis	2
1.1.1	Building blocks: cells and the extracellular matrix	2
1.1.2	Signaling regulators: morphogens and mechanics	3
1.2	Modeling techniques	4
1.2.1	Reaction-diffusion equations	4
1.2.2	Differential Geometry of curves and surfaces	5
1.2.3	Energy functionals and calculus of variations	6
1.2.4	Cellular Potts Model	7
1.2.5	Continuum mechanics	8
1.3	Model analysis methods	10
1.3.1	Asymptotic expansions	10
1.3.2	Phase space analysis and Geometric Singular Perturbation Theory	11
1.4	Experiments and Collaboration	14
1.5	Thesis outline	15
1.6	Outlook	17
2	Curvature induced patterns: A geometric, analytical approach to understanding a mechanochemical model	19
2.1	Introduction	20
2.2	Model derivation	22
2.2.1	Setup and context	22
2.2.2	Curve dynamics	23
2.2.3	Morphogen dynamics	26
2.2.4	Boundary conditions	28
2.3	Spatially periodic patterns	28
2.3.1	Geometric consistency conditions for an evolving curve	30
2.3.2	Phase space analysis and invariant manifolds	32
2.3.3	Periodic patterns for weak morphogen-curvature interplay ($A < 1$)	35
2.3.4	Periodic orbits for strong morphogen-curvature interplay ($A > 1$)	42
2.3.5	The possibility of geometric consistent periodic orbits	58
2.4	Numerical simulations	59

Contents

2.4.1	Simulations in the weak morphogen-curvature interplay regime, $A < 1$	59
2.4.2	Simulations in the strong morphogen-curvature interplay regime, $A > 1$	64
2.5	Discussion	68
2.6	Acknowledgments	70
3	Strain stiffening in a dynamic covalent polymer network leads to 3D collective cell behavior	71
3.1	Introduction	72
3.2	Results	74
3.2.1	Dynamic hydrogels to explore collective cell behavior	74
3.2.2	Tuning the computational model to investigate hPSC-CM response	76
3.2.3	Strain stiffening and stiffness properties effect radial alignment	78
3.2.4	Temporal progression of radial alignment is not reflected in simulations	80
3.2.5	Radial alignment is driven by collective cell behavior	82
3.2.6	Modulation of strain-stiffening behavior in non-fibrous hydrogel networks	84
3.2.7	Network connectivity impacts non-linear elasticity	86
3.2.8	Strain stiffening in a non-fibrous matrix can drive collective cell alignment	88
3.2.9	Implications and Opportunities for Future Work	89
3.3	Acknowledgments	90
3.4	Experimental methods	91
3.4.1	Materials	91
3.4.2	Synthetic Procedures	91
3.4.3	Hydrogel preparation	91
3.4.4	Oscillatory rheology	92
3.4.5	hPSC culture and differentiation in 2D	92
3.4.6	Cell encapsulation and 3D culture	93
3.5	Modeling methods	94
3.5.1	Substrate strains - Finite element method	95
3.5.2	Perceived strain stiffening	96
3.5.3	Cell shape - Cellular Potts Model	96
3.5.4	Traction forces - First-moment-of-area-model	98
3.5.5	Radial symmetric, linear prestrain	98
3.6	Supplementary Information	99
3.6.1	Experiments	99
3.6.2	Model	104
4	Understanding septin patterning: an energy based continuous model of the interaction between septin orientation and surface curvature	111
4.1	Introduction	112
4.2	Methods	114

4.2.1	Experimental observations	114
4.2.2	Model Assumptions	115
4.2.3	Model set up	115
4.2.4	Energy functional	117
4.2.5	Evolution equation derivation	118
4.2.6	Surface geometries of interest	120
4.2.7	Numerical implementation	121
4.3	Results	122
4.3.1	Septin orientation profile is qualitatively similar to experimental result with a fixed wave geometry	122
4.3.2	Response of septin orientation to local curvature on fixed wavy surfaces revealed by model analysis	125
4.3.3	Model predicts amplitude and period for stripe patterns on GUVs	126
4.3.4	Model predicts bump cavities on GUVs and shows septin orientation profiles on different bump geometries	129
4.4	Discussion and outlook	133
4.5	Acknowledgements	135
4.6	Supplementary Information	135
4.6.1	Parameter default settings	135
4.6.2	Equations for stipe-like patterns such as a wavy geometry . . .	136
4.6.3	Equations for bump pattern	137
4.6.4	Analytical study of the model for stripe like patterns	137
	Samenvatting	155
	Summary	157
	Curriculum Vitae	159
