Ratios in Artefacts and Ores from China:
Tracing Connections, Quantifying
Ambiguity, and Rethinking Provenance

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr. S. de Rijcke,
volgens besluit van het college voor promoties
te verdedigen op 13 mei 2026
klokke 13.00 uur

door

Chen Wang
geboren te Pingdu, Shandong Province, China
in 1998

Supervisor: Dr. J.E. Laffoon

Additional Supervisor: Prof. dr. P.A.I.H. Degryse (Katholieke Universiteit Leuven)

Doctorate Committee members: Prof. dr. J.C.A. Kolen
Prof. dr. J.A.C. Vroom
Prof. dr. A.G. Henry
Dr. D.J.G. Braekmans
Dr. K. Eremin (Harvard University)
Dr. L.M. Kootker (Vrije Universiteit Amsterdam)

The research in this thesis was performed at Faculty of Archaeology of Leiden University, The Netherlands.

Financial support for the publication of this thesis was kindly provided by:
Graduate School of Archaeology,
Leiden University Libraries,
China Scholarship Council.

Contents

1	Introduction	1
1.1	Background of the study	2
1.1.1	The history and use of metallic lead (Pb)	2
1.1.2	Lead isotopes as windows into past societies	5
1.1.3	Lead isotope research in China today	6
1.2	Research problem	14
1.2.1	Provenance and circulation of lead in ancient Chinese glass and glaze: evidence from eight samples of the Warring States and Han periods	14
1.2.2	Overlap, indistinctiveness and grouping of lead resources in China	14
1.3	Research objectives and aims	15
1.4	Scope of the study	15
1.5	Significance of the study	16
1.5.1	Contribution to ancient Chinese glass and glaze research	16
1.5.2	Revisiting lead resource overlap and zoning	16
1.5.3	Quantifying indistinctiveness to understand lead isotopic ambiguity	16
1.5.4	Integrating geochemical and computational approaches	16
1.6	Methodological framework	17
1.6.1	Experimental tools and methods	17
1.6.2	Analytical and statistical methods	19
1.6.3	Approaches to provenance and circulation studies	21
1.7	Thesis outline	21
2	A Methodological Case Study of Lead Resource Movements during the Warring States Period and Western Han Dynasty: Applying Kernel Density Estimation to Four Lead–Barium Glass <i>Bi</i> Artifacts	23
2.1	Introduction	25
2.1.1	Background of Chinese ancient glass	25

2.1.2	Raw materials for glass making	26
2.2	Research aim	27
2.3	Case description	28
2.4	Methodological framework and application	31
2.4.1	X-ray fluorescence (XRF) analysis	31
2.4.2	Lead isotope composition	31
2.4.3	Kernel density estimates (KDE) method	31
2.5	Results	32
2.5.1	Chemical elemental composition	32
2.5.2	Lead isotope composition	32
2.5.3	Kernel density estimates (KDE) method	33
2.6	Discussion	35
2.6.1	The dominant region for glass-making: South China	35
2.6.2	Strengths and limitations of using KDE method	38
2.7	Conclusions	38
3	Exploring Circulation Dynamics in Han Dynasty China: Insights from Isotopic Analysis of Lead Glazed Pottery	41
3.1	Introduction	43
3.2	Materials	45
3.3	Methodology	48
3.3.1	Chemical composition analysis	48
3.3.2	Lead isotopic analysis	48
3.3.3	Kernel density estimates method	48
3.4	Results	50
3.4.1	X-ray fluorescence	50
3.4.2	Scanning electron microscopy with energy dispersive microanalysis	50
3.4.3	Lead isotopic analysis	51
3.5	Discussion	52
3.5.1	The origin of lead raw materials	52
3.5.2	Comparison with archaeological objects	53
3.5.3	Different products, different lead sources?	55
3.5.4	The expansion of the Han Dynasty	57
3.6	Conclusion	59
4	Quantifying Ambiguity: A Risk-Aware Framework for Assessing Lead Isotope Indistinctiveness in Chinese Ore Deposits	61
4.1	Introduction	63
4.2	Methodology	65

4.2.1	Kernal density estimates (KDE)	65
4.2.2	Clustering analysis of ore-forming processes and spatial groupings	65
4.3	Result	66
4.3.1	Widespread overlap of lead isotope signatures among Chinese lead deposits	66
4.3.2	Geological zoning and ore-forming processes do not ensure lead isotopic uniqueness	67
4.4	Discussion	68
4.4.1	Ambiguity among Chinese lead deposits and deposit-Level overlap metrics for archaeological use	68
4.4.2	Construction of the indistinctiveness index and risk classification framework	70
4.4.3	Regional trends and risk distribution	71
4.4.4	Robustness, applicability, and limitations	73
4.5	Conclusion	74
4.6	Appendix	76
4.6.1	Introduction	76
4.6.2	Grouping deposits by lead isotopic characteristics	76
4.6.3	Exploring the geographical patterns of statistical grouping	78
4.6.4	Lead isotope analysis and material connections	79
4.6.5	Limitations of the grouping experiments	80
5	Discussion	83
5.1	Lead isotopes in artifacts: more like mtDNA than fingerprints	84
5.1.1	Why mtDNA offers a better analogy than fingerprints in provenance studies	84
5.1.2	Artifacts as carriers of lead “lineages”	86
5.1.3	Interconnections of artifacts and deposits	86
5.2	Is proximity-based procurement justified? Lead isotope evidence from Chinese artifacts	87
5.2.1	Grouping artifacts by lead isotope patterns: clustering and K-means methods	87
5.2.2	Clustering individual artifacts by lead isotopes: patterns and correspondence with ore groups	88
5.2.3	Cultural lead and its divergence from natural deposits	92
5.2.4	Conclusion	96
6	Conclusion	99
6.1	Main outcomes and their implications	100

6.1.1	Origins and circulation of glass and glazed artifacts	100
6.1.2	Methodological contributions of KDE and machine learning . . .	100
6.1.3	Reevaluating traditional mining source zoning and exploring new lead source groupings	101
6.1.4	Indistinctiveness and a risk-aware framework for provenance .	101
6.1.5	Rethinking lead isotopes and resource acquisition in ancient societies	102
6.2	Limitations	102
6.2.1	Insufficiency of datasets	102
6.2.2	Limitations in analytical techniques	103
6.2.3	Constraints in research scope	104
6.2.4	Challenges in conceptual frameworks	104
6.3	Future Research	104
6.3.1	Expansion of the lead isotope database	104
6.3.2	Integrating lead isotope analysis into site-based multi-isotope research	105
6.3.3	Increase the use of computer science in isotope archaeology . .	106
6.3.4	Advancing archaeological theory for lead isotope studies	106
	Summary and Samenvatting	108
	References	113
	List of publications	131
	Acknowledgements	133
	Curriculum Vitae	135
