Special Section on Emerging Topics in Hardware Computing Systems Security

Guest Edited by:

GANG QU
University of Maryland, USA

DEBDEEP MUKHOPADHYAY
IIT Kharagpur, India

NELE MENTENS
KU Leuven, Belgium

WEIQIANG LIU
Nanjing University of Aeronautics and
Astronautics, China.

Gang Qu received the BS degree in mathematics from the University of Science and Technology of China (USTC), China, and the PhD degree in computer science from the University of California, Los Angeles (UCLA), USA. He is currently a professor with the Department of Electrical and Computer Engineering, University of Maryland, College Park, MD, USA, where he leads the Maryland Embedded Systems and Hardware Security Lab (MeshSec Lab) and the Wireless Sensor Laboratory. His research interests include hardware security and trust, artificial intelligence, security in vehicular systems, and the Internet of Things. He is also known for his work on wireless sensor networks, low power and energy efficient embedded system design.

Debdeep Mukhopadhyay received the BTech, MS, and PhD degrees from IIT Kharagpur, India. He is currently a full professor with the Department of Computer Science and Engineering, IIT Kharagpur. He has initiated the Secured Embedded Architecture Laboratory (SEAL), with a focus on embedded security and side channel attacks. He was a visiting scientist with NTU Singapore, visiting associate professor with NYU Shanghai, an assistant professor with IIT Madras, and a visiting researcher with the NYU Tandon School of Engineering, USA. His research interests include cryptography, hardware security, and VLSI.

Nele Mentens received the master's degree in electrical engineering (micro-electronics) from KU Leuven, Belgium, in 2003, and the PhD degree in engineering science in 2007, with the title Secure and Efficient Coprocessor Design for Cryptographic Applications on FPGAs. From 2007 to 2014, she was a teacher with KHLim University College and with KU Leuven as a postdoctoral researcher. Since 2014, she has been an associate professor with KU Leuven and an academic staff member with COSIC Research Group. Her research interests include the field of configurable computing for security applications and embedded security in constrained environments.

Weiqiang Liu is currently a professor and the vice dean with the College of Electronic and Information Engineering & College of Integrated Circuits, NUAA. He received the BSc degree in information engineering from the Nanjing University of Aeronautics and Astronautics (NUAA), Nanjing, China, and the PhD degree in electronic engineering from Queen' University Belfast (QUB), Belfast, U.K., in 2006 and 2012, respectively. In December 2013, he joined the College of Electronic and Information Engineering, NUAA, where he is currently a full professor. His research interests include approximate computing, computer arithmetic, hardware security, VLSI design for DSP and cryptography, and mixed-signal integrated circuit.
