Curriculum Vitae

Wessel Verbeet was born on November 14, 1992, in Vlaardingen, the Netherlands. After completing his secondary education (havo) at PENTA College Blaise Pascal in Spijkenisse in 2011, he started his bachelor's studies in Chemistry at Hogeschool Rotterdam. During this period, he conducted a research internship supervised by Prof. dr. Leonard J. Prins and under the daily supervision of Dr. Flavio della Salle at the University of Padova. His thesis, entitled "*Synthesis and Characterization of Novel Surfactants for the Creation of Life-like Supramolecular assemblies*", was awarded *Best Thesis of 2016 at Hogeschool Rotterdam* by Stichting Haags Laboratorium Onderwijs and received an honorable mention in the *Gouden Spatel 2016* competition organized by KNCV. Wessel obtained his BSc degree in Applied Sciences in 2016.

In the same year, he started his master's studies in Chemistry at Leiden University. His master's research internship was conducted in the group of Prof. dr. Alexander Kros, under the daily supervision of Dr. Niek S. A. Crone. His thesis, entitled "*Designing Intramolecular Cross-linked Peptides for Photoactivated Coiled-coil Mediated Membrane Fusion*", was completed in 2019, after which he obtained his MSc degree.

In September 2019, Wessel started his doctoral research studies in the Metals in Catalysis, Biomimetics & Inorganic Materials (MCBIM) group under the supervision of Prof. dr. Sylvestre Bonnet and Prof. dr. Elisabeth Bouwman at Leiden University. His doctoral research focused on the design and synthesis of *trans* ruthenium(II) complexes for applications in photoactivated chemotherapy. Parts of his doctoral research were presented at national and international conferences, including the 3rd *Frontiers in Photochemistry* conference (2022 Cancun, Mexico), the 44th *International Conference on Coordination Chemistry* (2022 Rimini, Italy) and the 16th *International Symposium on Applied Bioinorganic Chemistry* (2023 Ioannina, Greece). As part of the PhD program, Wessel also followed several courses, namely, Scientific Conduct offered by the Graduate School of Leiden University and the Advanced Summer School on Photochemistry 2022 offered by the Holland Research School of Molecular Chemistry (HRSMC).

In October 2024, Wessel continued his academic career as a postdoctoral researcher in the group of Prof. dr. Alexander Kros as part of the *Cat4CanCenter Synergy* project, in collaboration with the University of Amsterdam and Netherlands Cancer institute (NKI).

List of Publications

Dual Targeting of NAMPT and Tubulin with *Trans*-Ruthenium(II)-based Photoactivated Chemotherapy Complexes

W. Verbeet, S. K. Götzfried, A. Kornienko, S. Bonnet*, *in preparation*

Building a *Trans* Dissymmetric Ruthenium(II) Complex for Sequential Ligand Photosubstitution

W. Verbeet, A. Jiao, M. A. Siegler, S. Bonnet*, *in preparation*

Simple and Efficient Method for Mono- and Di-Amination of Polypyridine *N*-Oxides

W. Verbeet[‡], Y. Husiev[‡], S. Bonnet*, *Eur. J. Org. Chem.* **2024**, 27, e202400054

Ruthenium-Peptide Conjugates for Photoactivated Chemotherapy

I. Regeni*, M. Puister, Y. Husiev, W. Verbeet, I. M. Nardella, M. L. A. Hakkennes, K. Kayastha, S. Brünle, S. Bonnet*, *in preparation*

Stepwise Hierarchical Self-Assembly of Supramolecular Amphiphiles into Higher-Order Three-Dimensional Nano Structure

F. della Salle, W. Verbeet, S. Silvestrini, I. Fortunati, C. Ferrante, L. J. Prins*, *ChemNanoMat* **2018**, 4, 821 - 830

Acknowledgements

It goes without saying that the research presented in this thesis would have been impossible without the guidance, advice and overall support of others. Therefore, I would like to thank the people that have contributed in some way or form during these years.

Firstly, I would like to thank my promotor Prof. dr. *Sylvestre Bonnet* for giving me the opportunity to pursue a PhD under your supervision. After following your Photochemistry course during my master studies, I became fascinated by how light can be used for chemical and medicinal purposes. I want to thank you for the supportive and positive research environment you created, together with guidance and inspiration throughout the years. Even when times were tough, this kept me motivated and shaped me into the independent researcher I am today. Secondly, I want to thank my co-promotor Prof. dr. *Lies Bouwman* for her advice and insights on anything related to coordination chemistry, her meticulous corrections on my thesis chapters, and patiently reminding me to finish them.

I would also like to express my gratitude to all the collaborators that contributed to this thesis. Dr. *Sipeng Zheng* for the MS and ICPMS measurements. *Hans van den Elst* for the HRMS measurements. Dr. *Karthick Sai Sankar Gupta* and *Alfons Lefebvre* for their help with the NMR experiments. For the X-ray crystal structures, thanks to Dr. *Maxime Sieglar* from Johns Hopkins University. Special thanks to Dr. *Yurii Husiev* for the collaboration on our amination paper (the first purely organic synthetic paper from an inorganic group) and all the discussions on metal chemistry/music. I also had the privilege to supervise several students during their graduation project. Many thanks to *Andy, Amanda, Jesse, Floris* and *Pieter* for your enthusiasm and motivation during the (sometimes challenging) projects which you managed to progress independently. I wish you all the best in your future careers.

A special thanks goes to all past and present members of the MCBIM group. Working in such a friendly and supportive environment made the past years productive and truly a lot of fun. Thanks to *Irene, Vasiliki, Maarten, Daria, Valeriia, Marleen, Dennis, Ashok, Aswin, Lan, Christian, Liyan, Corjan, Ehider, Erik, Sina, Agnese, Selda, Ludo, Yurii, Joeri, Matthijs, Sjoerd, Phebe* and all the others. For the helpful brainstorming sessions, shared frustrations, shenanigans and many coffee breaks/drinks that made the long days fly by. Also, to all the friends I met along the way: Thank you for the many moments of relaxation, laughter and distraction when it was needed most.

Finally, I would like to thank my *Mom, Boy, Annelies* and little *Guus* for their support, encouragement and patience throughout this journey. Last but certainly not least, I want to thank you *Elena* for your support, strength and understanding. The past years were challenging at times, but you are always there for me, and I am deeply grateful to have you by my side.

To everyone who contributed in one way or another, thank you.
