Les Lumières

Probing the cosmic Epoch of Reionization
with high-redshift quasars

Proefschrift

ter verkrijging van
de graad van doctor aan the Universiteit Leiden,
op gezag van rector magnificus prof.dr. S. de Rijcke,
volgens besluit van het college voor promoties
te verdedigen op vrijdag 3 juli 2026
klokke 11.30 uur

door

Timo Kist

geboren te Zeven, Duitsland
in 1997

Promotores:

Prof.dr. J.F. Hennawi

Prof.dr. J. Schaye

Promotiecommissie:

Prof.dr. I.A.G. Snellen

Prof.dr. K.H. Kuijken

Prof.dr. H. Hoekstra

Prof.dr. M.G. Haehnelt (University of Cambridge)

Dr. F.B. Davies (Max Planck Institute of Astronomy)

Dr. E. Sellentin

Each cow on the cover represents a different reionisation topology whose average neutral fraction $\langle x_{\text{HI}} \rangle$ is computed within its respective coordinate system, assuming that white regions are neutral and black ones ionised. The line in the background is an artistic impression of a quasar spectrum with Lyman- α damping wing and proximity zone, generated according to the procedure outlined in Chapter 2 of this thesis.

Illustration by Annika Dahlkemper, scientific add-ons by the author.
