Acknowledgements

I would like to express my deepest gratitude to all those who have generously offered their help and steadfast support throughout my joint doctorate program journey. This academic expedition—stretching across East and West, connecting Xi'an and Leiden—has been made meaningful and possible because of you.

First and foremost, I extend my highest respect and sincere thanks to my supervisor at Leiden University, Prof.dr. Thomas Bäck. I am profoundly grateful for your outstanding guidance and unwavering trust, which significantly broadened my academic horizons. Your profound insight and deft, light-touch supervision elevated my work and made this collaborative endeavor truly invaluable.

I am wholeheartedly thankful to my co-supervisor, Dr. Hao Wang. You were the most reliable navigator in my daily research, from methodology refinement to manuscript polishing. Your rigorous approach and patient support were key to overcoming technical challenges and completing my work.

I wish to extend my special appreciation to my supervisor at Xi'an Jiaotong University, Prof. Qing Zhang. As the cornerstone of my academic career, you laid a solid foundation for me at XJTU. Your rigorous training and constant guidance, even after I went abroad, have imbued both chapters of my academic journey.

My deepest gratitude belongs to my dear family. To my parents—your selfless love and unreserved support have been the greatest source of courage that enabled me to venture across oceans and pursue my dreams. From Xi'an to Leiden, your understanding, encouragement, and quiet sacrifices have always been my warmest and firmest anchor. Whenever I faced challenges or felt homesick, thoughts of you renewed my strength to move forward. This

ACKNOWLEDGEMENTS

profound bond is the most precious pillar of my academic path.

Finally, I thank all the friends and colleagues who have enriched this “double-city narrative.” To my fellow lab members at Xi’an Jiaotong University—our shared endeavors during those XJTU years formed the solid starting point of my academic career. To my colleagues at Leiden University—your inspiring discussions and enjoyable collaborations filled my research life abroad with color and vitality. And to all the friends I met in both cities—your companionship has turned these two places into beloved homes. This unique experience has been made whole and unforgettable because of you.

Curriculum vitae

Xiaohan Wei was born on 1 August 1995 in Weifang, China. He received a B.S. degree in measuring and control technology and instrumentation from Xi'an Jiaotong University in 2017. In 2020, Xiaohan became a Ph.D. candidate in mechanical engineering at Xi'an Jiaotong University. In 2022, Xiaohan joined LIACS under the supervision of Prof. Thomas Bäck and Dr. Hao Wang. His current research interests include optimal control for mechanical systems, reinforcement learning, and fault diagnosis. During his PhD studies, he took courses in optimal control and scientific conduct, among others.
