PROEFSCHRIFT

ter verkrijging van  
de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus prof. dr. S. de Rijcke,  
volgens besluit van het college voor promoties  
te verdedigen op donderdag 9 juli 2026  
klokke 11.30 uur

door

**Sam Neppelenbroek**

geboren te Drijber  
in 1997

**Promotores**

Prof. Dr.. H.U. Scherer

Prof. Dr. R.E.M. Toes

**Leden promotiecommissie**

Prof. Dr. T.W.J. Huizinga

Prof. Dr. A.L.W. Huckriede (UMC Groningen)

Dr. J.K. de Vries-Bouwstra

Dr. J.A. ten Brinke (Sanquin)

## Table of contents

|                  |                                                                                                                                                                          |     |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 1</b> | Introduction on autoreactive B cell responses in autoimmune diseases                                                                                                     | 8   |
| <b>Chapter 2</b> | Autoreactive B cell responses targeting nuclear antigens in systemic sclerosis: Implications for disease pathogenesis                                                    | 28  |
| <b>Chapter 3</b> | Activation and clonal expansions hallmark the topoisomerase 1-reactive B cell response in systemic sclerosis                                                             | 56  |
| <b>Chapter 4</b> | Enhanced recognition of topoisomerase 1 upon DNA binding by a subset of anti-topoisomerase 1 autoantibodies in systemic sclerosis                                        | 92  |
| <b>Chapter 5</b> | Clonal autoantibodies identify fungal antigens as triggers of autoreactive B cells in a human autoimmune disease                                                         | 122 |
| <b>Chapter 6</b> | Autoreactive B cells remain active despite clinical disease control in rheumatoid arthritis                                                                              | 154 |
| <b>Chapter 7</b> | Intracellular citrulline-reactive B cell staining enables the identification of autoreactive B cells with low surface B cell receptor expression in rheumatoid arthritis | 174 |
| <b>Chapter 8</b> | Summarizing discussion                                                                                                                                                   | 186 |
| <b>Addendum</b>  | Nederlandse samenvatting                                                                                                                                                 | 211 |
|                  | Portfolio                                                                                                                                                                | 215 |
|                  | Curriculum vitae                                                                                                                                                         | 219 |
|                  | Publications                                                                                                                                                             | 221 |
