Curriculum Vitae

Marc was born in Vlissingen, the Netherlands in 1992. Marc became interested in sustainability in his late teens. Somewhere during this time he saw a 'VPRO Tegenlicht' episode where one of the interviewees had studied 'Industrial Ecology', which sparked his interest.

During his studies for Bachelor of Science in Mechanical Engineering at the Hogeschool Rotterdam (2013-2017) he did a minor in 'Sustainable Development' at Leiden University. There he learned about the Master of Science programme 'Industrial Ecology' at Leiden University that was also hosted there and decided to enroll (2017-2020). While the programme was intense, the sense of community and deep interests in sustainability of his peers made the effort worth it.

At the end of his masters programme, the Covid-19 epidemic happened, and he was forced to do most of his master thesis from home. Despite the added challenges everyone faced during this time, his thesis supervisor, Bernhard Steubing saw an opportunity to keep working together and Marc started a PhD with Bernhard, Mingming Hu and Arnold Tukker.

During his masters and PhD, Marc also worked on the development of the LCA software 'activity browser', which was quite rewarding in its own right.

After completing his PhD thesis, Marc will continue his academic work as a PostDoc working with Mara Hauck and working on prospective LCA of re-useable solar panels at the Technische Universiteit Eindhoven.

Acknowledgements

This has by far been the biggest project I have ever done and I owe thanks to many people who have helped make this possible. First, I want to thank my supervisors: Bernhard, as he suggested that I should apply for the position I was hired for after doing my master thesis with him. Next, I want to thank Mingming, as she's always been supportive, no matter the topic that got me excited and was always happy to provide me with advice and guidance. Last, but not least, I want to thank Arnold, who's helped shape all the work I've done into a thesis and was always incredibly quick with in-depth feedback. Besides my supervision team, I want to thank other CML colleagues: Reinout and Jeroen, who's vast expertise with LCA has helped inspire me throughout this entire process, and of course I want to thank Nils who's always been happy to be a sparring partner for ideas or just to chat about LCA. Of course, there have also been more direct PhD colleagues that have made each day better in no particular order: Amelie, Anna, Brenda, Carina, Catrin, Chen, Kristie, Martijn, Pablo, Rosalie, Steph, Thomas and Tycho, though some special thanks goes to Nina and Marin, my dear paranympths and friends who have always supported me. Outside of CML, I would like to thank Chris, Tomás and Romain, who have been a source of inspiration during my PhD through their work on open tools in the LCA community. Besides professional relationships, I need to thank my dear friends, Leon, Naomi and Marin for their support when times were tough. My loving parents and brothers deserve my deepest thanks, no matter the distance, for their support throughout this long process. Of course, I also want to thank my sister-in-law, Francien for her work in formatting and typesetting this thesis and taking so much work from my hands in this department, this thesis would have never been as beautiful without your help. Lastly, I want to give my sincerest thanks to Marieke, who's been the most patient, supportive, dedicated and loving partner I could ever wish for, without her support, this thesis would never have been finished.
