Evaluating the potential of novel antimicrobial strategies in a multimodal treatment model for implant-related infections

antibiotics, antimicrobial peptides, bacteriophages, induction heating

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. S. de Rijcke,
volgens besluit van het college voor promoties
te verdedigen op woensdag 2 september 2026
klokke 16:00 uur

door

Ellen Verheul
geboren te Gouda
in 1997

Promotor

Prof. dr. R.G.H.H. Nelissen

Co-promotores

Dr. P.H. Nibbering

Dr. B.G.C.W. Pijls

Promotiecommissie

Prof. dr. M.G.J. de Boer

Prof. dr. H.H. Smits

Prof. dr. ir. S.J.J. Brouns (Delft University of Technology)

Dr. M. Wouthuyzen-Bakker (University Medical Center Groningen)

“To be prepared is half the victory.”

- Miguel de Cervantes

Table of contents

Chapter 1	General introduction	10
Chapter 2	Bacteriophage ISP eliminates <i>Staphylococcus aureus</i> in planktonic phase, but not in the various stages of the biofilm cycle	24
Chapter 3	Biofilm-dispersed <i>Staphylococcus aureus</i> tolerate bacteriophage ISP and Sb-1: enhanced cell wall organization and reduced ribonucleoside synthesis	48
Chapter 4	Efficacy prediction of bacteriophage-antibiotic combinations against <i>Staphylococcus aureus</i> biofilms using planktonic bacteria	94
Chapter 5	Non-contact induction heating and SAAP-148 eliminate persisters within MRSA biofilms mimicking a metal implant infection	116
Chapter 6	Induction heating combined with antibiotics or SAAP-148 effectively reduces biofilm-embedded <i>Staphylococcus aureus</i> on a fracture-related implant mimic	130
Chapter 7	Summarizing discussion	150
Appendix	Nederlandse samenvatting	162
	Curriculum Vitae	165
	Portfolio	166
	Dankwoord	174
