Curriculum Vitae

Elham Memarian was born in Tehran, Iran. After finishing her high school education at Zahraye-Athar High School, she enrolled in the bachelor of Applied Chemistry at the Faculty of Science at Payam-e-Noor University (PNU), Iran in 2008. During this time, she was awarded several diplomas and medals because of her inventions at international and national invention expositions and competitions including a Gold Medal and Diploma awards in Korea (2011) and a Silver Medal award in Romania (2010). Then, she started her masters' in Analytical Chemistry at the Department of Analytical Chemistry and Pollutants at Shahid Beheshti University (SBU), Iran, from 2013 to 2015. During this period, Elham gained an immense interest in analytical chemistry and how it can be beneficial in the clinics to improve human life. For her master's thesis, Elham developed and optimized solid phase microextraction and electromembrane extraction techniques to measure certain drugs and pollutants and she was able to publish her first two papers in *Analytica Chimica Acta* and *Electrophoresis*.

After completing her master's degree, in 2017 she embarked on her PhD journey as an early-stage researcher in the GLYSIGN Marie Skłodowska-Curie European Industrial Doctorate program at Leiden University Medical Center (LUMC) in the Netherlands. The GlySign program offered a unique dual engagement in both industry and academia, equipping her with invaluable experience. At Genos d.o.o. in Zagreb, Croatia, under the supervision of Prof. Gordan Lauc, she utilized ultra-performance liquid chromatography (UPLC) to study *N*-glycan patterns in patients with type 2 diabetes. She also explored the interaction between poor health status (SHS) and metabolic syndrome (MetS) through *N*-glycan profiling. At LUMC, she worked under the supervision of Prof. Manfred Wuhler and Dr. Viktoria Dotz at the Center for Proteomics and Metabolomics (CPM). There, she studied protein glycosylation and its links to complications in type 2 diabetes using mass spectrometry. Her significant contributions to the GLYSIGN consortium are compiled in this PhD thesis.

From August 2022 till July 2023, Elham worked as a Senior Analyst at CPM, LUMC, the Netherlands.

Acknowledgements

The PhD journey is like a winding road, full of unexpected turns and ups and downs. But navigating it successfully requires one essential element: the unwavering support of colleagues, friends, and family. I am eternally grateful to everyone who contributed in some way to the completion of this dissertation.

First and foremost, I want to sincerely thank my promoters and co-promoter. My promoter, Professor Dr. Manfred Wuhrer, I deeply appreciate the opportunity you gave me to pursue my PhD and explore the exciting field of glycobiology. I hold deep respect for your supervision, enthusiasm, quick responses, and availability for discussions, as well as your brilliance, wisdom, and analytical acumen in advancing research, which have profoundly shaped my perspective as a researcher and inspired me to strive for excellence and curiosity in my work. My second promoter, Professor Dr. Gordan Lauc, I am deeply grateful for the transformative opportunity to participate in the GlySign project and for your warmth, ingenuity, and unwavering support throughout my PhD. Your insight, encouragement, and trust in me have been a constant source of motivation and have greatly contributed to my growth as a researcher.

I am immensely grateful to my co-promoter, Dr. Viktoria Dotz, for your exceptional guidance and unwavering support, even from afar. I truly appreciate your dedication to reviewing my manuscripts, providing insightful feedback and valuable suggestions. Your encouragement, analytical mind, and vast knowledge have made this challenging journey smoother and more rewarding, and I feel incredibly fortunate to have had you as my co-promoter.

A sincere thank you to Dr. Maja Pučić, who has been a supportive daily mentor at Genos. I am deeply grateful for your unwavering belief in my abilities, practical advice, and helpful suggestions. Working with you has been a genuine pleasure.

I am deeply grateful to the entire Genos team for fostering such a dynamic and inspiring environment. Being part of this group was a valuable learning experience. Collaborating with the GlycanAge team and seeing real-world applications of glycans gave me motivation and showed me how scientific knowledge could be translated into industry.

My sincere appreciation to the entire CPM team - an inspiring group of brilliant minds in glycobiology. It was an honor to be part of such a driven, collaborative, and innovative environment. I learned a great deal from your diverse ideas and exceptional analytical skills, and I'm confident in the team's continued success.

I am also grateful to LUMC for its inspiring clinical-academic environment. Despite ups and downs, seeing patients daily gave me a unique perspective on my work and made this experience truly meaningful.

Helen, Manu, and Suzanne, our incredible teachers, thank you for bringing a touch of sunshine to GlySign and reminding us of the brighter side of both scientific and non-scientific worlds.

I would like to thank Dr. Yuri van der Burgt for his valuable help with the Dutch translation of my dissertation summary. I truly appreciate your time and effort in ensuring its accuracy and clarity.

Dear GlySigners, thank you for making this journey so special. Each of you pushed yourselves and each other in unique ways, as we all strived for success, individually and collectively, for the sake of the patients. My heartfelt gratitude goes to my dear Paranympths, who have been wonderful friends throughout my PhD journey and continue to stand by my side during this final stage. I feel truly fortunate to have you with me.

I deeply appreciate the old and new friends I found along the way, words cannot fully describe how much I value everything; PhD-related or not; that we shared. My PhD journey would not have been the same without my dear friends Fatemeh(Rezaei), Shima(Evaazpour), Tooba, Zohreh, Negin, Zeinab, Fayeze, Zary, Mitra, Maryam, Samaneh, Mina, Azadeh, Zahra, Azra, Wei, and Mirela. You are all inspiring individuals and incredibly talented scientists from whom I have learned so much. Fatemeh and Shima, you are the coolest and smartest friends I know! Thank you for always being there.

I am deeply grateful to my beloved family for their endless love and care throughout this journey. From the bottom of my heart, I wish you all the best in life. Dearest parents, Maman & Baba, your unwavering trust and support have always been the guiding light in my life and a constant source of my happiness. Your boundless kindness can never be repaid. I am profoundly thankful for your patience in the face of the challenges and difficulties I may have caused. Every achievement of mine is indebted to your unconditional love and sacrifice.

My dearest and only sister, Farnam, I am deeply grateful for your endless encouragement and unwavering support. You have always been, and always will be, my honor. A special thank you for designing a beautiful cover that added a unique touch to my work, as well as for your invaluable help in completing some of the figures in my dissertation. Thank you for taking care of Maman and Baba after I moved to another country, and for handling many of my responsibilities for them in my absence. Your support means the world to me.

A special appreciation to my grandparents (both maternal and paternal). They were always filled with excitement and joy at every (academic) achievement of us, and I am certain they would have loved to celebrate the completion of my PhD with me. Although that day never came, I know they have always been watching over us and, in moments when I needed them most, provided me with spiritual support. My everlasting regret is not spending enough time with them before it was too late. You will forever hold a special place in my heart.

Finally, I want to express my heartfelt gratitude from the bottom of my heart to my dear husband and best friend ever, Turaj. Dearest Turaj, I cannot express how deeply I appreciate your unwavering support, patience, and, above all, your love. You have supported me in countless ways and stood by me through both the toughest and the most beautiful moments of life. You have always been - and will forever remain - the deepest honor of my heart. When I needed to practice my presentations, you were the most supportive audience I could ask for. Even when I decided to stay late or go to the lab during weekends, you always accompanied me and understood how important my work was to me. Additionally, I am sincerely grateful for your valuable advice and feedback, which helped me complete parts of my dissertation. You are the warmth of my life, and your unwavering support made this achievement possible. You make ordinary moments unforgettable, and that's the kind of magic I'm grateful for every day.

از خانواده عزیزم برای محبت و مراقبت بی پایان شان در طول مسیر زندگیم صمیمانه سپاسگزارم. از صمیم قلبم بهترین ها را برای شما آرزو دارم. پدر و مادر عزیزم، مامان و بابا، اعتماد و حمایت بی دریغ شما همیشه چراغ راه زندگی من بوده و شادی ام را تضمین کرده است. محبت بی پایان شما را هرگز نمی توان جبران کرد. از صبر و شکیبایی شما در برابر سختی ها و ناراحتی هایی که ممکن است برای شما ایجاد کرده باشم، بی نهایت قدردانم. همه دستاوردهایم را مدیون عشق و فداکاری بی دریغ شما هستم. ایمان شما به من و حمایت بی وقفه تان در هر شرایطی، زندگی ام را به کلی دگرگون و زیبا ساخت. راهنمایی های ارزشمند و حمایت همیشگی تان را در تمام طول زندگی گرامی خواهم داشت. شما در روزهای سخت، امید را در دل من زنده کردید و به تلاش ها و موفقیت هایم با عشق و توجه واقعی تان معنا بخشیدید.
